**Minerals Management Service****Outer Continental Shelf, Gulf of Mexico Region, Proposed Louisiana Barrier Shoreline Restoration Effort**

**AGENCIES:** Minerals Management Service (MMS), Department of the Interior; National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce; State of Louisiana Department of Natural Resources.

**ACTION:** Notice of Intent (NOI) to Prepare an Environmental Impact Statement (EIS) to Support Phase 1 of the Louisiana Barrier Shoreline Feasibility Study (Barataria-Terrebonne Basin Barrier Island Restoration Effort).

**PURPOSE OF THE NOI:** The NOI announces the decision to prepare an EIS and initiate the scoping process. The scoping process affords Federal, State, local government agencies, and other interested parties the opportunity to identify significant issues and alternatives to be analyzed in the EIS.

**DATES:** Comments must be submitted on or before June 14, 1996.

**PROPOSED ACTION:** The purpose to which the Federal agencies are responding in the barrier island project and the proposed major Federal action to be considered are as follows:

Purpose: The restoration, protection, and enhancement of Louisiana coastal wetlands, and for other purposes.

Proposed Action: Restoration of the Louisiana Barrier Shoreline as Identified in Phase 1 of the Louisiana Barrier Shoreline Feasibility Study (Barataria and Terrebonne Basins).

**SUMMARY AND BACKGROUND ON THE PROPOSED ACTION:** Under the auspices of the Coastal Wetlands Planning, Protection, and Restoration Act (CWPPRA), the feasibility and benefits of restoring the barrier islands of coastal Louisiana are currently being evaluated with respect to their role in wetlands protection and enhancement. A feasibility study is underway to assess and quantify wetland loss problems

linked to diminishing protection from barrier islands along the Louisiana coast, to identify solutions to these problems, and to determine the barrier configuration that will best protect Louisiana's coastal resources from environmental degradation. The feasibility study is being conducted in three phases: Phase 1, currently ongoing, encompasses the Barataria-Terrebonne island chain; Phase 2 will focus on the Chenier Plain coast; Phase 3 will focus on the Chandeleur Islands.

Within the Phase 1 study area, the State of Louisiana is proposing to renourish Isles Dernieres and Timbalier Islands using Federal offshore sand deposits. In addition to renourishment, other coastal restoration methods, such as dune building, vegetation planting, hard structures, and related actions may be employed. On April 19, 1995, the Governor of the State of Louisiana contacted the MMS to request a noncompetitive lease to use Federal sand resources from Ship Shoal for restoration of the Louisiana barrier islands. The MMS has determined that the use of Federal sand from Outer Continental Shelf (OCS) areas such as Ship Shoal for barrier island restoration and subsequent wetlands protection meets the negotiated agreement requirements under Section 8(k)(2)(A)(i) of the OCS Lands Act (43 U.S.C. 1337(k)(2)(A)(i)).

The National Environmental Policy Act (NEPA) process is initiated when Federal agencies consider major actions which may significantly affect the environment. Because the environmental consequences of barrier island restoration are not fully understood and the extraction of Federal sand for the purposes of barrier island and wetlands restoration is considered a major Federal action, an EIS will be prepared.

This specific EIS will support the Phase 1 portion of the feasibility study. Impacts associated with Phases 2 and 3 will be evaluated in subsequent NEPA documents. The EIS will be used to assist the CWPPRA Task Force in making funding decisions regarding Phase 1 restoration methods as well as aid the MMS with respect to the request for a noncompetitive lease to the State of Louisiana for the use of Federal sand. The EIS will consider all reasonable restoration methods, the environmental consequences resulting from such methods, any alternatives to using material from the Ship Shoal area, and possible mitigation measures or stipulations which could be applied on the OCS or in the renourishment areas to ensure that a balance between orderly resource development and protection of
