BILLING CODE 6712-01-F

47 CFR Part 73

[MM Docket No. 95-98; RM-8603]

Radio Broadcasting Services; Cheyenne and Saratoga, WY

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Commission, at the request of Rule Communications and KRAE, Inc., allots Channel 260A at Cheyenne, Wyoming, as potentially the community's fifth local FM transmission service. See 60 FR 33398, June 28, 1995. We will also permit Rule to amend its pending application (BPH-930923ME) to specify operation on Channel 260A in lieu of Channel 285A and retain its cut-off protection. To accommodate the allotment, we will delete vacant Channel 260C at Saratoga, Wyoming, since no party has expressed an interest in the channel. An engineering analysis has determined that Channel 260A can be allotted at Cheyenne in compliance with the Commission's minimum distance separation requirements without the imposition of a site restriction, provided Channel 260C at Saratoga is deleted. The coordinates for Channel 260A at Cheyenne are North Latitude 41-08-18 and West Longitude 104-48-48. With this action, this proceeding is terminated.

EFFECTIVE DATE: March 11, 1996.

§ 90.210 Emission Masks.

* * * Unless otherwise stated, per paragraphs (d)(4), (e)(4), and (m) of this section, measurements of emission power can be expressed in either peak or average values provided that emission powers are expressed with the same parameters used to specify the unmodulated transmitter carrier power.

⁸ In the 421–512 MHz band, mobile stations designed to operate with a 12.5 kHz channel bandwidth or designed to operate on a frequency specifically designated for itinerant use or designed for low-power operation of two watts or less, must have a frequency stability of 2.5 ppm. Mobile stations designed to operate with a 6.25 kHz channel bandwidth must have a frequency stability of 0.5 ppm.

¹¹ Paging transmitters operating on paging-only frequencies must operate with frequency stability of 5 ppm in the 150–174 MHz band and 2.5 ppm in the 421–512 MHz band.

one or more associated stations located within 45 degrees of azimuth shall be directional and have a front to back ratio of at least 15 dB. Except as provided in this paragraph (b)(7), the height of the antenna used at any mobile station serving as a base, fixed or mobile relay station may not exceed 7 m. (20 ft) above the ground level.

(i) No limit shall be placed on the length or height above ground level of any commercially manufactured radiating transmission line when the transmission line is terminated in a non-radiating load and is routed at least 7 m. (20 ft) interior to the edge of any

structure or is routed below ground level.

(ii) Only sea-based stations, and central alarm stations operating on frequencies allocated for central station protection operations, may utilize antennas mounted not more than 7 m. (20 ft.) above a man-made supporting structure, including antenna structures.
