SUPPLEMENTARY INFORMATION:

I. Abstract

The Service Annual Survey (SAS) provides dollar volume estimates of the total output of personal, business, amusement, social, health, and other professional services in the United States. The Bureau of Economic Analysis (BEA), the primary Federal user, uses the information in developing the national income and product accounts, compiling benchmark and annual input-output tables, and computing gross domestic product by industry. The Bureau of Labor Statistics (BLS) uses the data as input to its Producer Price Indexes and in developing productivity measurements. Other government agencies such as the Health Care Financing Administration (HCFA) use the data for program, planning, and development. The Census Bureau uses these data to provide new insight into changing structural and cost conditions that will directly impact the planning and design of future economic census questionnaires. Private industry uses the data in planning and as a tool for marketing analysis. Data are collected from all of the largest firms and from a sample of small- and medium-sized businesses, selected using a stratified random sampling procedure. The SAS sample is reselected periodically, generally at 5-year intervals. The largest firms continue to be canvassed when the sample is re-drawn, while nearly all of the small- and medium-sized firms from the old sample are replaced. The 1996 SAS introduced a new sample based on 1992 census results and expanded the annual coverage to include Standard Industrial Classification 8299, Schools and Educational Services. The number of firms surveyed and the amount of burden hours increases as a result of the implementation of the new sample and expanded coverage.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Transportation Annual Survey (TAS) provides detailed estimates of revenue and expenses for the commercial motor freight transportation and public warehousing industries. The Bureau of Economic Analysis (BEA), the primary Federal user, uses the information in developing the national income and product accounts, compiling benchmark and annual input-output tables, and computing gross domestic product (GDP) by industry. Agencies of the U.S. Department of Transportation (DOT) use the data for policy development and program management and evaluation. The Bureau of Labor Statistics (BLS) uses these data as inputs to its Producer Price Indexes and in developing productivity measurements. The Census Bureau uses these data to provide new insight into changing structural and cost conditions that will impact the planning and design of future economic census questionnaires. Private industry also uses these data as a tool for marketing analysis. Data are collected from all of the largest firms and from a sample of small- and medium-sized businesses, selected using a stratified sampling procedure.
