Proposed Projects

1. Questionnaire Design Research Laboratory (QDRL), 1998-2000 (0920-0222—Revision). The QDRL conducts pretesting activities related to the development of NCHS and other Federal survey questionnaires, such as the National Health Interview Survey (NHIS). These activities mainly involve use of the cognitive interview, in which volunteer respondents ("laboratory subjects") are administered draft survey questions, and are asked to react to those questions. The cognitive interviewer notes sources of error in these questions, based on problems that subjects have in comprehending the questions and in attempting to recall the information requested. After several cycles of testing of small numbers of respondents (generally 10-12), and development of the questions between testing "rounds," the questionnaires are improved to the point to which they are ready for field testing and household administration. QDRL staff are also engaged in the conduct of general questionnaire design research, in which survey questions are administered to laboratory subjects using different phrasings, or under different administration modes (e.g., face-to-face versus telephone), in order to determine the optimal means for presenting the questions. These investigative pretesting activities are now routinely used by NCHS and by other survey organizations for testing and development purposes, and result in high data quality at a
