

Bernardino Mountains, San Bernardino County, California. Each species occurs on Federal, State, and private lands. *Sidalcea pedata* is a several stemmed perennial 2–4 decimeters tall and *Thelypodium stenopetalum* is a simple-stemmed biennial 3–8 decimeters tall. The plant species occur as components in moist to wet montane meadow habitat associated with swales, drainages and the shores of Big Bear and Baldwin Lakes. Although commercial and residential development is considered the primary threat to the two species, changes in surface hydrology, recreational activities and livestock grazing also threaten these species. Protection and management of the species' habitat are the primary goals of the recovery effort.
