*Description:* The telecommunications traffic data report is an annual reporting requirement imposed on common carriers engaged in the provision of overseas telecommunications services. The reported data is useful for international planning, facility authorization, monitoring emerging developments in communications services, analyzing market structures, tracking the balance of payments in international communications services, and market analysis purposes. The reported data enables the Commission to fulfill its regulatory responsibilities. In addition to the annual filing requirement, private line resellers must report their U.S. outbound and inbound traffic originating or terminating over resold U.S. private lines on a semi-annual basis. This requirement applies for three years following a Commission finding that a particular country offers U.S. carriers "equivalent" opportunities for resale. The information is collected so that the Commission can closely monitor the equivalency decision's impact on the amount of IMTS traffic diverted from the settlements process. Sections 211, 214, 218, 219, 220 and 403 of the Communications Act of 1934, as amended, accord the Commission broad authority to obtain information from common carriers. Part 43 of the Commission's rules establishes the procedures for filing periodic reports and certain other information, including annual traffic and revenue reports. Obligation to respond: mandatory.

Public reporting burden for the collections of information is as noted above. Send comments regarding the burden estimate or any other aspect of the collections of information, including suggestions for reducing the burden to Performance Evaluation and Records Management, Washington, D.C. 20554.

Federal Communications Commission.
