## NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-269, 50-270, and 50-287]

### Oconee Nuclear Station, Units 1, 2, and 3; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. DPR-38, DPR-47, and DPR-55 issued to Duke Energy Corporation (the licensee) for operation of the Oconee Nuclear Station, Units 1, 2, and 3, located Oconee County, South Carolina.

The proposed amendments would revise Technical Specification (TS) Table 4.1-1 and Specification 4.5.2.1.2 to allow a one-time extension for specified Unit 2 refueling outage surveillances during operating cycle 16.

Before issuance of the proposed license amendments, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendments would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

This proposed change has been evaluated against the standards in 10 CFR 50.92 and has been determined to involve no significant hazards, in that operation of the facility in accordance with the proposed amendment would not:

1. Involve a significant increase in the probability or consequences of an accident previously evaluated?

No. A review of the previous two instrument channel tests and calibrations for

the instruments discussed in the amendment request concluded that no adverse effects should occur as a result of the one-time extension. The ICCM [Inadequate Core Cooling Monitor] should be available to perform its intended function during the requested extension period. Thus, the probability and consequences of an accident previously evaluated will not be significantly increased.

In addition, a review of the previous ES channel 5 and 6 manual trip test and Reactor Building Cooling system test that are discussed in the amendment request concluded that no adverse effects should occur as a result of the one-time extension. ES channels 5 and 6 and the Reactor Building Cooling system should be available to perform their intended function during the requested extension period. Thus, the probability and consequences of an accident previously evaluated will not be significantly increased.

2. Create the possibility of a new or different kind of accident from the accidents previously evaluated?

No. Since the one-time extension should not cause any adverse effects on the ICCM, ES channels 5 and 6, or Reactor Building Spray system, a new or different kind of accident from the accidents which were previously evaluated will not occur. The ICCM, ES channels 5 and 6, and Reactor Building Cooling system, should be available to perform their intended function during the requested extension period.

3. Involve a significant reduction in a margin of safety?

No. The margin of safety will not be significantly reduced by this amendment request because the ICCM, ES channels 5 and 6, and Reactor Building Cooling system, should be available to perform their intended function during the requested extension period. In addition, the review of the previous tests and calibrations which are discussed in the amendment request concluded that no adverse effects should occur as a result of the one-time extension.

Duke has concluded based on the above information that there are no significant hazards involved in this amendment request.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination.

Normally, the Commission will not issue the amendment until the expiration of the 30-day notice period. However, should circumstances change during the notice period such that failure to act in a timely way would
