

acquisition is complete, the BLM will help lead the development of a management plan. The focus of the management plan is the protection and monitoring of threatened and endangered species and their aquatic and terrestrial habitats, particularly within the old-growth redwood groves. Management of the surrounding second-growth would include significant restoration activities to accelerate the return of old-growth dependent species. Virgin old-growth forest stands will not be subject to silvicultural practices. The re-establishment of natural drainage networks will include extensive road restoration with the goal of removing, decommissioning, or stabilizing the entire existing road network and re-instating natural processes over time in an essential roadless landscape. Recreation activities and visitor services at the Headwaters Forest Reserve will be developed through the planning process. Visitor use will be managed in a manner consistent with the management of late-successional and old-growth forest habitats and the species they support.

Opportunities for recreation use will be an evolving program where demand and impacts of uses will be analyzed over time. Management of the area will rely on findings of a detailed and comprehensive ecosystem analysis (watershed analysis) and an assessment of forest stand conditions. The findings of these analyses will set the ecological parameters within which all management will be conducted, including restoration, research, recreation, transportation, and monitoring.

Extensive public involvement, along with public outreach and education, will be a vital component in the analysis process.
