

citizenship where Americans feel greater responsibility toward others. Similarly the mission statement of the agency speaks directly to the benefits of service:

"In doing so [engaging in service], the Corporation will foster civic responsibility, strengthen the ties that bind us together as a people, and provide educational opportunity for those who make a substantial commitment to service."

Thus, a central purpose of the agency and its programs is to foster citizenship and development for those who serve. This study will look at the effects of service on the members who serve in the three Americorps programs: State/National, Volunteers in Service to America (VISTA), and National Civilian Community Corps (NCCC). Approximately 40,000 citizens serve in Americorps each year.

#### Current Action

The objectives of this study are to: describe the outcomes that are associated with serving and document changes in those outcomes over time; identify factors explaining variation in outcomes at different stages of time; and, to the degree possible, specify the causal influences of national service on its members. Outcome domains will include attitudes and behaviors for civic engagement, education, employment, and life skills.

To meet these objectives, the study will select a nationally representative sample of incoming AmeriCorps members from a sufficient number of programs to generalize overall population. It will collect data from a self-report survey measuring the above life outcomes for AmeriCorps members, as well as individual background characteristics. This will require baseline data at entry to the program as well as repeated measurements over a several years time period. In order to address the issue of causality, or the direct influence that service had on the outcomes, the study will include a comparison group for each of the three programs. The program's populations and service activities are very diverse and require separate sampling plans and separate comparison groups. In addition, the study will incorporate a smaller retrospective study of former AmeriCorps members carried out in combination with the main longitudinal study. In this way, information from previous members on outcomes over the past several years will be available sooner than the larger longitudinal study of new members.

The Corporation seeks approval of the survey that will be filled be responded to by the AmeriCorps members.
