Affected Entities: Entities potentially affected by this action are secondary lead smelters. Specifically, the affected facility in each smelter is any pot furnace of more than 250 kg charging capacity, blast (cupola) furnaces, and reverberatory furnaces.

Abstract: Secondary lead smelters produce elemental lead from scrap, providing the primary means for recycling lead-acid batteries (automotive) into useable products. Currently upwards of 95% of all lead-acid batteries are recycled by these facilities. Secondary lead smelters emit lead and non-lead particulate matter in quantities that, in the Administrator's judgement, cause or contribute to air pollution that may endanger public health or welfare. Consequently, New Source Performance Standards were promulgated for this source category. These standards rely on the proper installation, operation and maintenance of particulate control devices such as electrostatic precipitators or scrubbers.
