

New Applications Received

SCDNR (1245) has requested a 3-year permit to establish scientifically valid indices of abundance for the northern sub-population of the loggerhead, Kemp's ridley, green and leatherback sea turtles which occur in the Atlantic Ocean off the southeastern United States. This study is intended to capture juveniles and adults, thereby providing a more comprehensive assessment of total population abundance and an assessment of the health of individual animals.

Modification Requests Received

NWFSC requests a modification to ESA section 10(a)(1)(A) scientific research permit 1194. Permit 1194 authorizes NWFSC annual takes of adult artificially propagated SnR spring/summer chinook salmon and adult artificially propagated UCR steelhead associated with an evaluation of passive integrated transponder (PIT) tag interrogation systems at Bonneville Dam on the Columbia River in the Pacific Northwest. The objectives of the study are to evaluate the ability of the prototype tag detection systems to detect PIT-tagged adult salmon passing through the facility and evaluate the effects of the detection system on adult behavior as they approach and pass through the system. For the modification, NWFSC requests an annual take of adult UCR spring chinook salmon associated with the research. ESA-listed adult chinook salmon are proposed to be captured, tagged with PITs and non-permanent visual markers, released, and monitored from above or underwater with video cameras. The modification is requested to be valid for the duration of the permit, which expires on December 31, 2003.

NWFSC requests a modification to ESA section 10(a)(1)(A) scientific research permit 1212. Permit 1212 authorizes NWFSC annual takes of juvenile SnR sockeye salmon; juvenile naturally produced and artificially propagated SnR spring/summer chinook salmon; juvenile SnR fall chinook salmon; and juvenile naturally produced and artificially propagated UCR steelhead associated with four studies at the hydropower dams on the Snake and Columbia Rivers in the Pacific Northwest. The goal of Study 1 is to provide up-to-date survival estimates of juvenile salmonids as they migrate past McNary Dam on the Columbia River. The goal of Study 2 is to evaluate the specific trouble areas in the juvenile fish bypass system at Lower Monumental Dam on the Snake River.

The goal of Study 3 is to compare the performance of juvenile salmonids tagged with Sham radiotransmitters with juvenile salmonids tagged with PITs at Lower Granite Dam on the Snake River. The goal of Study 4 is to determine tailrace residence times of radio-tagged hatchery chinook salmon under varying operational conditions at Lower Monumental Dam and to identify spill conditions that utilize the smallest volumes of water to maximize fish passage efficiency at Ice Harbor Dam on the Snake River. The research will provide information that will be used to develop corrective measures to improve juvenile fish passage at the dams. For the modification, NWFSC requests a take of juvenile MCR steelhead associated with Study 1. ESA-listed juvenile steelhead are proposed to be captured at McNary Dam, sampled for biological information, and released. ESA-listed juvenile steelhead indirect mortalities associated with the research are also requested. The modification is requested to be valid for the duration of the permit, which expires on December 31, 2003.

Amendment to Modification Request Received

On September 25, 1998, NMFS published a notice in the **Federal Register** (63 FR 51340) that an application was received from ICFWRU for a modification to ESA section 10(a)(1)(A) scientific research permit 994. Permit 994 authorizes ICFWRU annual takes of adult SnR sockeye salmon; adult SnR spring/summer and fall chinook salmon; and adult UCR steelhead associated with scientific research designed to assess the passage success and homing behavior of adult salmonids that migrate upriver past the eight dams and reservoirs in the lower Columbia and lower Snake Rivers, evaluate specific flow and spill conditions, and evaluate measures to improve adult anadromous fish passage. For the modification, ICFWRU requested a take of adult SnR steelhead associated with the scientific research. The modification to permit 994 has not yet been issued because a final rule providing take prohibitions for SnR steelhead under section 4(d) of the ESA has not been published by NMFS. NMFS has received an amendment of ICFWRU's application for modifications to permit 994. In the application amendment, ICFWRU requests an increase in the take of adult SnR sockeye salmon associated with a new study designed to monitor the passage of adult sockeye salmon returning to the upper Salmon River in Idaho. ESA-listed adult sockeye salmon are

proposed to be captured at Lower Granite Dam on the Snake River, tagged with radiotransmitters and identifier tags, released, and tracked electronically. Also for the application amendment, ICFWRU requests takes of adult UCR spring chinook salmon; adult LCR chinook salmon; adult MCR steelhead; and adult LCR steelhead associated with the sampling effort at Bonneville Dam on the Columbia River. The modification as amended is requested to be valid for the duration of the permit, which expires on December 31, 2000.
