

The CSAP GPRA Adult and Youth questionnaires, which have been approved by OMB (OMB No. 0930-0208) for use in all CSAP prevention services programs, will be used to measure ATOD use and risk factors associated with ATOD abuse among program participants and comparison subjects. Scales from the CSAP Core Measures list (OMB No. 0930-0230) and the CSAP National Youth Survey (OMB No. 0930-0178) will be used to measure other important risk and protective factors. The cross-site instrument (containing CSAP GPRA, scales from the CSAP Core Measures list, and scales from the CSAP National Youth Survey) is augmented with additional scales in order to measure other important risk factors such as family conflict and parental stress. Protective factors that serve to guard against ATOD abuse include educational aspirations, school connectedness, and family cohesion. Data will also be gathered from program

reports using a "dosage form" that will document services provided to youth and their adult caregivers.

The evaluation data will be collected through self-report questionnaires administered to program and comparison youth and adults, and to Mentors at the Mentoring Study Sites. Each youth and adult in the intervention and comparison group will complete questionnaires at three different times: (1) Baseline, (2) program exit and (3) 6-month follow up. Each Mentor will complete a background information form at baseline; mentees will complete a questionnaire about their mentor at program exit and at 6-month follow up. The dosage form will be completed by Mentors and Family Strengthening program staff on a weekly basis for program youth and adults.

Sample size, respondent burden, and intrusiveness have been minimized to be consistent with the cross-site evaluation objectives. Procedures are

employed to safeguard the privacy and confidentiality of participants. Every effort has been made to coordinate cross-site data collection with local data collection efforts in order to minimize respondent burden. Pilot tests assisted in controlling burden and ensuring the user-relevance of questions.

Evaluation results will have significant implications for the substance abuse prevention field, the allocation of grant funds, and evaluation activities conducted by multiple Federal, state, and local government agencies. Results will be used to develop federal policy in support of SAMHSA/CSAP program initiatives, inform the public of lessons learned and findings, improve existing programs, and promote replication and dissemination of effective prevention strategies.

The following table shows the estimated annualized burden for data collection.

Response type	Number of respondents	Responses/ respondent	Average burden/ response (hrs.)	Total burden hours
*Youth (intervention and comparison)	2,500	3	.50	3,750
