Title: NESHAP for Mercury (40 CFR part 61, subpart E) OMB Control Number 2060-0097, EPA ICR Number 0113.08. This is a request to renew an existing, approved collection that is scheduled to expire on June 30, 2003. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB.

Abstract: The NESHAP for Mercury, published at 40 CFR part 61, subpart E, were proposed on December 7, 1971, promulgated on April 6, 1973, and amended on October 14, 1975 and March 19, 1987. These standards apply to all stationary sources which process mercury ore to recover mercury, use mercury chlor-alkali cells to produce chlorine gas and alkali metal hydroxide, and incinerate or dry wastewater treatment plant sludge. Approximately 107 sources (100 sludge incineration and drying plants and seven mercury-cell chlor-alkali plants) are currently subject to the standard; and no additional sources are expected to become subject to the standard in the next three years. Mercury is the pollutant regulated under this standard. This information is being collected to assure compliance with 40 CFR part 61, subpart E.

Owners or operators of affected facilities described must make the following one-time-only reports: Notification of the date of construction or reconstruction; notification of the anticipated and actual dates of startup; notification of any physical or operational change to an existing facility which may increase the regulated

pollutant emission rate; notification of the date of the initial performance test; and the results of the initial performance test. These facilities must also maintain records of performance test results, startups, shutdowns, and malfunctions. In order to ensure compliance with the standards, adequate recordkeeping and reporting is necessary. This information enables the Agency to: (1) Identify the sources subject to the standard; (2) ensure initial compliance with emission limits; and (3) verify continuous compliance with the standard. A written report of each period for which hourly monitored parameters fall outside their established limits is required semiannually for mercury-cell chlor-alkali facilities. Reporting and recordkeeping is mandatory under section 114 of the Clean Air Act as amended in 40 CFR part 61. Records of emission test results and other data needed to determine total emissions will be maintained at the source and made available for inspection for a minimum of two years.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number. The OMB Control Numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 156 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Stationary Mercury processing facilities.

Estimated Number of Respondents: 107.

Frequency of Response: Annually, Semiannually, and initially.

Estimated Total Annual Hour Burden: 17,818.

Estimated Total Annual Cost: \$0 includes \$0 annualized capital or O&M costs.

Changes in the Estimates: There is a decrease of 8,686 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This decrease in burden from the most recently approved ICR is due to a decrease in the number of sources. We have determined that the number of sources currently subject to this standard has decreased based on the most recent data available on the Air Facility System database for NESHAAP respondent cost is due to a labor rate change where the rate was increased; however, the total overall cost is reduced due to the smaller number of sources covered by the rule.

Dated: June 5, 2003.

Doreen Sterling,

Acting Director, Collection Strategies Division.

Title: NSPS for Steel Plants: Electric Arc Furnaces and Argon-Oxygen Decarburization Vessels (40 CFR part 60, subparts AA and AAa) (Renewal) (OMB Control Number 2060-0038, EPA ICR Number 1060.12). This is a request to renew an existing approved collection that is scheduled to expire on June 30, 2003. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB.

Abstract: The New Source Performance Standards (NSPS) for electric arc furnaces were proposed on October 21, 1974 (39 FR 37466) and promulgated on September 23, 1975 (40 CFR 43850). These standards apply to the following affected facilities in steel plants that produce carbon, alloy, or specialty steels: Electric arc furnaces (EAFs) and dust handling systems commencing construction, modification or reconstruction after the date of proposal and on or before August 17, 1983. A review of subpart AA in 1980 resulted in the promulgation of a new standard (NSPS, subpart AAa). The review of NSPS subpart AA found that fugitive emissions capture technology had improved since promulgation of NSPS subpart AA, and that argon-oxygen decarburization (AOD) vessels are a significant source of particulates in specialty steel shops. NSPS, subpart AAa was proposed on August 17, 1983 and promulgated on October 31, 1984. The new standard established new standards applicable to EAFs, AOD vessels, and dust handling systems constructed, modified, or reconstructed after August 17, 1983. On March 2, 1999, the Agency promulgated a direct final rule to amend subparts AA and AAa in response to a petition made by the Common Sense Initiative Council, established under a charter approved pursuant to the Federal Advisory Committee Act (FACA), which approved daily visible emissions observations as an alternative to static pressure monitoring at an EAF with a
