

the hydrogen economy, which is an important measure from which the success of program education strategies can be evaluated.

(5) *Respondents*: Although the numbers of respondents and methods of information collection will differ for each of the populations, the general scope and temper of the four collections will be the same. The general public will be surveyed first. That survey and the general public responses may influence the design of the surveys for the other target populations. For the general public, a random (probability sample) survey of 1,000 adults, age 18 and over, will be conducted via computer-assisted phone telephone interviews (CATI) or by other appropriate mechanism. About twenty closed-end questions will be posed. For students, a random survey of 500 teens (ages 12–17) and 500 pre-teens (ages 6–11) will be conducted, also using CATI or other technology and closed-end questions. Approximately 100–150 primary and secondary educators will be randomly selected from a national contact list for interviewing. Questions for educators will be of both closed-end and open-end formats. Contacts with energy agencies in all 50 states and the District of Columbia will be made, and a limited number of local (*i.e.*, municipal) agencies will also be contacted. Questions to state and local government agencies will be of both closed-end and open-end formats. A limited number of large-scale or potential large-scale users of energy sources powered by hydrogen and fuel cells will also be interviewed using both closed-end and open-end questions.

(6) *Estimated Number of Burden Hours*: For the general public survey, the burden is estimated at ten minutes per respondent for 1,000 respondents, for a total time and cost burden of 167 hours and \$0. The total burdens for the other populations will depend on the designs of those surveys, but will be similar in temper and scope to the burden for the general public survey. The total time and cost burden for the student survey is tentatively estimated to be 133 hours and \$0; the total burden for educators is estimated to be 25 hours and \$0. The total burden for the state and local government and large-scale user surveys is expected to be less than the burden for the student survey.
