Proposed Project

EPI-AID Recommendations for Effective Control and Prevention—New—Epidemiology Program Office (EPO), Centers for Disease Control and Prevention (CDC).

Background & Brief Description:

CDC is requesting a 3-year approval to collect data from epidemiologic aid investigations. The purpose of this data collection is to assess the number and proportion of Epidemic AID (EPI-AID) investigations that provide practical recommendations for effective control and prevention. The EPI-AID

mechanism is a means for Epidemic Intelligence Service (EIS) officers of the Centers for Disease Control and Prevention (CDC), along with other CDC staff, to provide technical support to state health agencies requesting assistance for epidemiologic field investigations (disease outbreaks or health emergencies).

Currently, Epi Trip Reports are delivered to the state health agency official requesting assistance shortly after completion of the EPI-AID investigation. This official can comment on both the timeliness and the practical utility of the recommendations from the investigation. Upon completion of the EPI-AID investigation, requesting officials at the state or local health department will be asked to complete a brief questionnaire to assess the promptness of the investigation and the usefulness of the recommendations.

This data collection methodology will improve the EPI-AID mechanism which allows CDC to respond rapidly to public health problems in need of urgent attention, thereby providing an important service to state and other public health agencies; and to provide supervised training opportunities for EIS officers (and, sometimes, other CDC trainees) to actively participate in epidemiologic investigations. There are no costs to respondents.

ANNUALIZED BURDEN TABLE

Respondents	No. of respondents	Number of responses per respondent	Average burden per response in hrs.)	Total burden hours
EPI-AID Requests	100	1	10/60	17
Total	100	17
