### Federal Railroad Administration

#### Petition for Waiver of Compliance

In accordance with Part 211 of Title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

#### Wabtec Corporation

[Waiver Petition Docket Number FRA-2004-18895]

The Wabtec Corporation (Wabtec) seeks a waiver of compliance from certain provisions of 49 CFR Part 232, Brake System Safety Standards for Freight and Other Non-Passenger Trains and Equipment. Specifically, § 232.409(d)—Inspection and Testing of end-of-train devices, which requires the telemetry equipment to be tested for accuracy and calibrated if necessary at least every 368 days. It also requires that the date and location of the last calibration or test as well as the name of the person performing the calibration or test, be legibly displayed on a weather-resistant sticker or other marking device affixed to the outside of both the front and the rear unit.

This waiver will cover all Wabtec TrainLink II Head of Train (HTD's) and End of Train devices (EOT's) that were produced since March 4, 2002, and all existing TrainLink units that are upgraded with the new WRE digitally synthesized radio. If the waiver is approved, Wabtec and associated service centers will attach a sticker on all new and upgraded units identifying they are equipped with the new WRE digital radio and are covered by the waiver. Wabtec has concluded that with the advanced technology, there is no need to annually test and calibrate units built or upgraded with the new synthesized radio.

Previous generation radio designs used manual tuning coils and potentiometers that were subject to drift due to vibration and temperature shifts. These older designs required manual

adjustments to assure that the radio was operating on the proper frequencies. The new WRE TrainLink II synthesized digital radio provides a continuous, fully automatic self-calibrating feature, along with advanced diagnostics to assure accuracy and dependability in radio transmission. As a result, there is no manual calibration or adjustment in this new radio design. The transceiver is designed specifically for the harsh railroad environment and incorporates phase lock loop circuitry, along with temperature and voltage controlled crystal oscillators to maintain spectral (signal) purity. This automatic algorithm works by optimizing the VCO control parameters to achieve minimum phase noise. It automatically calibrates the power amplifier (PA) and power amplifier driver (RF) bias current every time the transmitter is powered. This automatic calibration feature is the heart of maintaining the radio's performance integrity. Should the radio experience a component failure, the auto-cal routine will cycle continuously, effectively shut down the radio, and provide the appropriate "No Comm" display in the cab of the locomotive. Failure in the micro/power supply areas will also result in an inoperable radio, and the same "No Comm" message will be received in the locomotive cab.

Wabtec also concludes that since the synthesized radio requires no manual adjustments, and if the waiver is approved no annual testing will be required, there is no need for the record keeping requirements (*i.e.* Sticker with date location, and name of person performing the test).

Wabtec has been producing the synthesized digital radio for over 2 years. Currently, there are over 25,000 TrainLink II systems in operation worldwide, including approximately 20,000 on U.S. railroads. Wabtec states that these units have provided reliable service since their introduction.

#### Golden Isles Terminal Railroad, Inc.— Acquisition and Operation Exemption—CSX Transportation, Inc.

Golden Isles Terminal Railroad, Inc. (GITM), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1150.41 to acquire from CSX Transportation, Inc. (CSXT) and operate approximately 6.45 miles of rail line from approximately milepost ASO 493.3 at or near Staley Avenue, to the end of the track at approximately milepost ASO 499.75, in Savannah, GA,<sup>1</sup> and lease from CSXT the real property comprising the right-of-way underlying the subject line.

GITM certifies that its projected annual revenues as a result of this transaction will not result in the creation of a Class II or Class I rail carrier.

<sup>1</sup> GITM is purchasing from CSXT the track, rails, ties, ballast, culverts and all other non-real property assets that comprise the subject line.

The transaction was scheduled to be consummated on or after August 26, 2004.

If the verified notice contains false or misleading information, the exemption is void *ab initio*. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the transaction.
