**NUCLEAR REGULATORY COMMISSION**

**Notice of Availability of Draft Report for Comment: "Estimating Loss-of-Coolant Accident (LOCA) Frequencies Through the Elicitation Process," NUREG-1829**

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Notice of availability and request for comments.

**DATES:** Written comments must be provided by November 30, 2005.

*Background:* In support of an effort to develop a risk-informed revision of the emergency core cooling system (ECCS) requirements for commercial nuclear power plants, estimates of loss-of-coolant accident (LOCA) frequencies have been developed which will enable redefinition of the design-basis break size for these requirements. These LOCA frequency estimates have been developed using an expert elicitation process by consolidating service history data and insights from probabilistic fracture mechanics (PFM) studies with knowledge of plant design, operation, and material performance. This expert elicitation to develop LOCA frequency estimates is described in draft NUREG-1829, "Estimating Loss-of-Coolant Accident (LOCA) Frequencies Through the Elicitation Process" (June 2005).

The ECCS requirements in the United States are contained in 10 CFR 50.46, Appendix K to Part 50, and General Design Criterion (GDC) 35. Specifically, ECCS design, reliability, and operating requirements exist to ensure that the system can successfully mitigate postulated LOCAs. Consideration of an

instantaneous break with a flow rate equivalent to a double-ended guillotine break (DEGB) of the largest primary piping system in the plant generally provides the limiting condition in the required 10 CFR Part 50, Appendix K analysis. However, the DEGB is widely recognized as an extremely unlikely event, so NRC staff is performing a risk-informed revision of the design-basis break size requirements.

A central consideration in selecting a risk-informed design basis break size is an evaluation of the LOCA frequency as a function of break size. The most recent NRC-sponsored study of pipe break failure frequencies is contained in NUREG/CR-5750 (Poloski, 1999). Unfortunately, these estimates are not sufficient for design basis break size selection because they do not address all current passive-system degradation concerns (e.g., primary water stress corrosion cracking) and they do not discriminate among breaks having effective diameters greater than 6 inches.

There have been two approaches traditionally used to estimate LOCA frequencies and their relationship to pipe size: (i) Estimates based on statistical analysis of service experience data and (ii) PFM analysis of specific postulated failure mechanisms. Neither approach is fully suitable for evaluating LOCA event frequencies due to the rarity of these events and the modeling complexity. This study used an expert elicitation process, which is well-

recognized for quantifying phenomenological knowledge when data or modeling approaches are insufficient. Elicitation responses from a panel of 12 experts determined individual LOCA frequency estimates for the 5th percentile, median, mean and 95th percentile of the frequency distribution for each of six LOCA categories. Group estimates were determined by aggregating the individual estimates using the geometric mean of the individual estimates for each frequency parameter (i.e., median, mean, 5th and 95th percentiles). Group variability was estimated by calculating 95% confidence bounds for each of the group frequency parameters. A number of sensitivity analyses were conducted to examine the effects on the quantitative results from variation of the assumptions, structure and techniques of the baseline analysis procedure.

Solicitation of Comments: The NRC seeks comments on the report and is especially interested in comments on the following questions:

1. Is the structure of the expert elicitation process appropriate for the stated problem and goals of the study?
2. Are the assumptions and methodology of the analysis framework used to process the panel responses appropriate and reasonable? Are they consistent with the type of information provided by the expert panel and the goals of the study?
3. Is the geometric mean aggregation methodology appropriate for the panel

responses and the study goals? Should other aggregation methodologies be considered and what are their advantages and disadvantages?

**Comment Period:** The NRC will consider all written comments received before November 30, 2005. To facilitate the comment process the NRC will conduct a workshop on October 31, 2005, to be held in room O4B6 at NRC Headquarters, 11545 Rockville Pike, Rockville, Maryland. In the workshop, the staff will provide an overview of the report and address clarification of items identified by the public. A preliminary agenda is attached. A separate notice will be published in the **Federal Register** announcing the public workshop. Comments received after November 30, 2005, will be considered if time permits. Comments should be addressed to the contact listed below.

**Availability:** An electronic version of the report and the accompanying experts' raw data files, are available electronically at <http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/sr1829/> and through the NRC's Electronic Reading Room at <http://www.nrc.gov/reading-rm/adams.html>. ### Submission for OMB Review; Comment Request for Extension of an Expiring Information Collection: Establishment Information Form, Wage Data Collection Form, Wage Data Collection Continuation Form DD 1918, DD 1919, and DD 1919C

**AGENCY:** Office of Personnel Management.

**ACTION:** Notice.

**SUMMARY:** Under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, May 22, 1995), the Office of Personnel Management (OPM) has submitted to the Office of Management and Budget a request for extension of three previously-approved information collection forms for which approval will soon expire. The Establishment Information Form, the Wage Data Collection Form, and the Wage Data Collection Continuation Form are wage survey forms developed by OPM for use by the Department of Defense to establish prevailing wage rates for Federal Wage System employees.

The Department of Defense contacts approximately 21,200 businesses annually to determine the level of wages paid by private enterprise establishments for representative jobs common to both private industry and the Federal Government. Each survey collection requires 1–4 hours of respondent burden, resulting in a total yearly burden of approximately 75,800 hours.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–8358, fax (202) 418–3251, or e-mail [mbtoomey@opm.gov](mailto:mbtoomey@opm.gov). Please include a mailing address with your request.

**DATES:** Submit comments on or before November 3, 2005.

**ADDRESSES:** Send or deliver comments to:

- Donald J. Winstead, Deputy Associate Director for Pay and Performance Policy, Office of Personnel Management, Room 7H31, 1900 E Street, NW., Washington, DC 20415–8200; fax (202) 606–4264; or e-mail [pay-performance-policy@opm.gov](mailto:pay-performance-policy@opm.gov); and

- Brenda Aguilar, OPM Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building NW., Room 10235, Washington, DC 20503.
