

on either small or large melon handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. In addition, as noted in the initial regulatory flexibility analysis, USDA has not identified any relevant Federal rules that duplicate, overlap or conflict with this rule.

Further, the Committee's meeting was widely publicized throughout the melon industry and all interested persons were invited to attend the meeting and participate in Committee deliberations. Like all Committee meetings, the September 16, 2004, meeting was a public meeting and all entities, both large and small, were able to express their views on this issue.

An interim final rule concerning this action was published in the **Federal Register** on November 26, 2004. Copies of the rule were mailed by the Committee's staff to all Committee members and melon handlers. In addition, the rule was made available through the Internet by USDA and the Office of the Federal Register. That rule provided for a 60-day comment period which ended January 25, 2005. One comment was received during that period. The comment concerned melon imports from Mexico and is, therefore, not applicable to this rulemaking action because the South Texas melon marketing order does not impact melon imports. The comment also stated that the Committee should be disbanded. The Committee is authorized under the marketing order and the Act. No changes are made as a result of the comment.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: <http://www.ams.usda.gov/fv/moab.html>. Any questions about the compliance guide should be sent to Jay Guerber at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

After consideration of all relevant material presented, including the Committee's recommendation, and other information, it is found that the regulations suspended in this final rule, which adopts, without change, the interim final rule, as published in the **Federal Register** (69 FR 68761, November 26, 2004), no longer tend to effectuate the declared policy of the Act.

Agricultural Marketing Service

7 CFR Part 985

[Docket No. FV04-985-2 IFR-A]

Marketing Order Regulating the Handling of Spearmint Oil Produced in the Far West; Revision of the Salable Quantity and Allotment Percentage for Class 3 (Native) Spearmint Oil for the 2004-2005 Marketing Year

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim final rule with request for comments.

SUMMARY: This rule amends a prior interim final rule that increased the quantity of Class 3 (Native) spearmint oil produced in the Far West that handlers may purchase from, or handle for, producers during the 2004-2005 marketing year. The prior interim final rule increased the Native spearmint oil salable quantity from 773,474 pounds to 1,095,689 pounds, and the allotment percentage from 36 percent to 51 percent. This rule increases the Native spearmint oil salable quantity by an additional 171,873 pounds from 1,095,689 pounds to 1,267,562 pounds, and the allotment percentage by an additional 8 percent from 51 percent to 59 percent. The Spearmint Oil Administrative Committee (Committee), the agency responsible for local administration of the marketing order for spearmint oil produced in the Far West, unanimously recommended this rule to avoid extreme fluctuations in supplies and prices and to help maintain stability in the Far West spearmint oil market.

DATES: Effective June 1, 2004, through May 31, 2005; comments received by April 25, 2005, will be considered prior to issuance of a final rule.

ADDRESSES: Interested persons are invited to submit written comments

concerning this rule. Comments must be sent to the Docket Clerk, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue, SW., STOP 0237, Washington, DC 20250-0237; Fax: (202) 720-8938; e-mail: moab.docketclerk@usda.gov; or Internet: <http://www.regulations.gov>. All comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be made available for public inspection in the Office of the Docket Clerk during regular business hours, or can be viewed at: <http://www.ams.usda.gov/fv/moab.html>.

Hiller, Northwest Marketing Field Office, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1220 SW., Third Avenue, Suite 385, Portland, Oregon 97204; telephone: (503) 326-2724, Fax: (503) 326-7440; or George Kelhart, Technical Advisor, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue, SW., STOP 0237, Washington, DC 20250-0237; telephone: (202) 720-2491, Fax: (202) 720-8938.

Small businesses may request information on complying with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue, SW., STOP 0237, Washington, DC 20250-0237; telephone: (202) 720-2491, Fax: (202) 720-8938, or e-mail: Jay.Guerber@usda.gov.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Order No. 985, as amended (7 CFR part 985), regulating the handling of spearmint oil produced in the Far West (Washington, Idaho, Oregon, and designated parts of Nevada and Utah), hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), hereinafter referred to as the "Act."

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before

parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule amends an interim final rule that was published in the **Federal Register** on October 21, 2004 (69 FR 61755). That rule, which was based on two unanimous Committee recommendations increased the quantity of Native spearmint oil that handlers may purchase from, or handle for, producers during the 2004–2005 marketing year, which ends on May 31, 2005. Pursuant to authority contained in §§ 985.50, 985.51, and 985.52 of the order, at its September 13, 2004, meeting, the Committee unanimously recommended that the allotment percentage for Native spearmint oil for the 2004–2005 marketing year be increased by 12 percent from 36 percent to 48 percent. The Committee held another meeting on October 6, 2004, where, based on an unanticipated increase in demand, they unanimously recommended that the allotment percentage for Native spearmint oil for the 2004–2005 marketing year be increased by an additional 3 percent from 48 percent to 51 percent. Specifically, that rule increased the salable quantity from 773,474 pounds to 1,095,689 pounds, and the allotment percentage from 36 percent to 51 percent for Native spearmint oil for the 2004–2005 marketing year.

This amended interim final rule, which is based on a unanimous Committee recommendation made at a meeting on January 20, 2005, increases the salable quantity an additional 171,873 pounds from 1,095,689 pounds to 1,267,562 pounds, and the allotment percentage an additional 8 percent from 51 percent to 59 percent for Native spearmint oil for the 2004–2005 marketing year.

The initial salable quantity and allotment percentages for Scotch and Native spearmint oils for the 2004–2005 marketing year were recommended by the Committee at its October 8, 2003,

meeting. The Committee recommended salable quantities of 766,880 pounds and 773,474 pounds, and allotment percentages of 40 percent and 36 percent, respectively, for Scotch and Native spearmint oils. A proposed rule was published in the **Federal Register** on January 23, 2004 (69 FR 3272). Comments on the proposed rule were solicited from interested persons until February 23, 2004. No comments were received. Subsequently, a final rule establishing the salable quantities and allotment percentages for Scotch and Native spearmint oils for the 2004–2005 marketing year was published in the **Federal Register** on March 22, 2004 (69 FR 13213). Subsequently, an interim final rule made more Native spearmint oil available for the 2004–2005 marketing year. This rule was published in the **Federal Register** on October 21, 2004 (69 FR 61755). No timely comments were received in response to the interim final rule.

The salable quantity is the total quantity of each class of oil that handlers may purchase from, or handle for, producers during a marketing year. The total salable quantity is divided by the total industry allotment base to determine an allotment percentage. Each producer is allotted a share of the salable quantity by applying the allotment percentage to the producer's individual allotment base for the applicable class of spearmint oil.

Taking into consideration the following discussion on adjustments to the Native spearmint oil salable quantity, the 2004–2005 marketing year salable quantity of 1,095,689 pounds will therefore be increased to 1,267,562 pounds.

The original total industry allotment base for Native spearmint oil for the 2004–2005 marketing year was established at 2,148,539 pounds and was revised at the beginning of the 2004–2005 marketing year to 2,148,410 pounds to reflect a 2003–2004 marketing year loss of 129 pounds of base due to non-production of some producers' total annual allotments. When the revised total allotment base of 2,148,410 pounds is applied to the originally established allotment percentage of 36 percent, the 2004–2005 marketing year salable quantity of 773,474 pounds is effectively modified to 773,428 pounds.

By increasing the salable quantity and allotment percentage, this amended interim final rule makes an additional amount of Native spearmint oil available by releasing oil from the reserve pool. When applied to each individual producer, the 8 percent allotment percentage increase allows

each producer to take up to an amount equal to 8 percent of their allotment base from their Native spearmint oil reserve. This action makes an additional 118,990 pounds of Native spearmint oil available to the market.

The following table summarizes the Committee recommendation:

Native Spearmint Oil Recommendation

(A) Estimated 2004–2005 Allotment Base—2,148,539 pounds. This is the estimate that the original 2004–2005 Native spearmint oil salable quantity and allotment percentage was based on.

(B) Revised 2004–2005 Allotment Base—2,148,410 pounds. This is 129 pounds less than the estimated allotment base of 2,148,539 pounds. This is less because some producers failed to produce all of their 2003–2004 allotment.

(C) Initial 2004–2005 Allotment Percentage—36 percent. This was recommended by the Committee on October 8, 2003.

(D) Initial 2004–2005 Salable Quantity—773,474. This figure is 36 percent of 2,148,539 pounds.

(E) Initial Adjustment to the 2004–2005 Salable Quantity—773,428 pounds. This figure reflects the salable quantity initially available after the beginning of the 2004–2005 marketing year due to the 129 pound reduction in the industry allotment base to 2,148,410 pounds.

(F) First Revised Increase in Allotment Percentage—15 percent. The Committee recommended a 12 percent increase at its September 13, 2004, meeting and an additional 3 percent increase at its October 6, 2004, meeting, for a total increase of 15 percent which was effective on October 21, 2004.

(G) Second Revised Increase in Allotment Percentage—8 percent. This was recommended by the Committee on January 20, 2005.

(H) First Revised 2004–2005 Allotment Percentage—51 percent. This figure was derived by adding the first revised increase of 15 percent to the initial 2004–2005 allotment percentage of 36 percent.

(I) Second Revised 2004–2005 Allotment Percentage—59 percent. This figure was derived by adding the 8 percent to the first revised 2004–2005 allotment percentage of 51 percent.

(J) First Revised Calculated 2004–2005 Salable Quantity—1,095,689 pounds. This figure is 51 percent of the revised 2004–2005 allotment base of 2,148,410 pounds.

(K) Second Revised Calculated 2004–2005 Salable Quantity—1,267,562 pounds. This figure is 59 percent of the

revised 2004–2005 allotment base of 2,148,410 pounds.

(L) First Revised Computed Increase in the 2004–2005 Salable Quantity—322,262 pounds. This figure is 15 percent of the revised 2004–2005 allotment base of 2,148,410 pounds.

(M) Second Revised Computed Increase in the 2004–2005 Salable Quantity—171,873 pounds. This figure is 8 percent of the revised 2004–2005 allotment base of 2,148,410 pounds.

In making this second revision recommendation, the Committee considered all available information on price, supply, and demand. The Committee also considered reports and other information from handlers and producers in attendance at the meeting and the report given by the Committee manager from handlers and producers who were not in attendance. The 2004–2005 marketing year began on June 1, 2004. Handlers have reported purchases of 1,055,641 pounds of Native spearmint oil for the period of June 1, 2004, through January 20, 2005. This amount exceeds the five-year average of 852,259 pounds for this period by 203,352 pounds. On average, handlers indicated that the estimated total demand for the 2004–2005 marketing year could range from a minimum of 1,212,000 pounds to as much as 1,242,000 pounds. This amount exceeds the five-year average for an entire marketing year of 973,456 pounds by as little as 238,544 pounds and as much as 268,544 pounds. Therefore, based on past history, the industry may not be able to meet market demand without this increase. When the Committee made its initial recommendation for the establishment of the Native spearmint oil salable quantity and allotment percentage for the 2004–2005 marketing year, it had anticipated that the year would end with an ample available supply.

Based on its analysis of available information, USDA has determined that the salable quantity and allotment percentage for Native spearmint oil for the 2004–2005 marketing year should be increased to 1,267,562 pounds and 59 percent, respectively.

This amended rule further relaxes the regulation of Native spearmint oil and will allow for market needs and improve producer returns. In conjunction with the issuance of this rule, the Committee's revised marketing policy statement for the 2004–2005 marketing year has been reviewed by USDA. The Committee's marketing policy statement, a requirement whenever the Committee recommends implementing volume regulations or recommends revisions to existing volume regulations, meets the intent of

§ 985.50 of the order. During its discussion of revising the 2004–2005 salable quantities and allotment percentages, the Committee considered: (1) The estimated quantity of salable oil of each class held by producers and handlers; (2) the estimated demand for each class of oil; (3) prospective production of each class of oil; (4) total of allotment bases of each class of oil for the current marketing year and the estimated total of allotment bases of each class for the ensuing marketing year; (5) the quantity of reserve oil, by class, in storage; (6) producer prices of oil, including prices for each class of oil; and (7) general market conditions for each class of oil, including whether the estimated season average price to producers is likely to exceed parity. Conformity with USDA's "Guidelines for Fruit, Vegetable, and Specialty Crop Marketing Orders" has also been reviewed and confirmed.

The increase in the Native spearmint oil salable quantity and allotment percentage allows for anticipated market needs for this class of oil. In determining anticipated market needs, consideration by the Committee was given to historical sales, and changes and trends in production and demand.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 8 handlers of spearmint oil who are subject to regulation under the marketing order and approximately 98 producers of Class 3 (Native) spearmint oil in the regulated area. Small agricultural service firms are defined by the Small Business Administration (SBA) (13 CFR 121.201) as those having annual receipts of less than \$5,000,000, and small agricultural producers are defined as those having annual receipts of less than \$750,000.

Based on SBA's definition of small entities, the Committee estimates that 2 of the 8 handlers regulated by the order

could be considered small entities. Most of the handlers are large corporations involved in the international trading of essential oils and the products of essential oils. In addition, the Committee estimates that 15 of the 98 Native spearmint oil producers could be classified as small entities under the SBA definition. Thus, a majority of handlers and producers of Far West spearmint oil may not be classified as small entities.

The Far West spearmint oil industry is characterized by producers whose farming operations generally involve more than one commodity, and whose income from farming operations is not exclusively dependent on the production of spearmint oil. A typical spearmint oil-producing operation has enough acreage for rotation such that the total acreage required to produce the crop is about one-third spearmint and two-thirds rotational crops. Thus, the typical spearmint oil producer has to have considerably more acreage than is planted to spearmint during any given season. Crop rotation is an essential cultural practice in the production of spearmint oil for weed, insect, and disease control. To remain economically viable with the added costs associated with spearmint oil production, most spearmint oil-producing farms fall into the SBA category of large businesses.

Small spearmint oil producers generally are not as extensively diversified as larger ones and as such are more at risk to market fluctuations. Such small producers generally need to market their entire annual crop and do not have the luxury of having other crops to cushion seasons with poor spearmint oil returns. Conversely, large diversified producers have the potential to endure one or more seasons of poor spearmint oil markets because income from alternate crops could support the operation for a period of time. Being reasonably assured of a stable price and market provides small producing entities with the ability to maintain proper cash flow and to meet annual expenses. Thus, the market and price stability provided by the order potentially benefit the small producer more than such provisions benefit large producers. Even though a majority of handlers and producers of spearmint oil may not be classified as small entities, the volume control feature of this order has small entity orientation.

This rule amends an interim final rule that was published in the **Federal Register** on October 21, 2004 (69 FR 61755). That rule, which was based on two unanimous Committee recommendations, increased the quantity of Native spearmint oil that

handlers may purchase from, or handle for, producers during the 2004–2005 marketing year, which ends on May 31, 2005. Pursuant to authority contained in §§ 985.50, 985.51, and 985.52 of the order, at its September 13, 2004, meeting, the Committee unanimously recommended that the allotment percentage for Native spearmint oil for the 2004–2005 marketing year be increased by 12 percent from 36 percent to 48 percent. The Committee held another meeting on October 6, 2004, where, based on an unanticipated increase in demand, they unanimously recommended that the allotment percentage for Native spearmint oil for the 2004–2005 marketing year be increased by an additional 3 percent from 48 percent to 51 percent. Specifically, that rule increased the salable quantity from 773,474 pounds to 1,095,689 pounds, and the allotment percentage from 36 percent to 51 percent for Native spearmint oil for the 2004–2005 marketing year.

This amended interim final rule, which is based on a unanimous Committee recommendation made at a meeting on January 20, 2005, increases the salable quantity an additional 171,873 pounds from 1,095,689 pounds to 1,267,562 pounds, and the allotment percentage an additional 8 percent from 51 percent to 59 percent for Native spearmint oil for the 2004–2005 marketing year. This rule relaxes the regulation of Native spearmint oil and will allow producers to meet market needs and improve returns.

An econometric model was used to assess the impact that volume control has on the prices producers receive for their commodity. Without volume control, spearmint oil markets would likely be over-supplied, resulting in low producer prices and a large volume of oil stored and carried over to the next crop year. The model estimates how much lower producer prices would likely be in the absence of volume controls.

The recommended salable percentages, upon which 2004–2005 producer allotments are based, are 40 percent for Scotch and 59 percent for Native (a 23 percentage point increase from the original salable percentage of 36 percent). Without volume controls, producers would not be limited to these allotment levels, and could produce and sell additional spearmint. The econometric model estimated a \$1.35 decline in the season average producer price per pound (from both classes of spearmint oil) resulting from the higher quantities that would be produced and marketed if volume controls were not used (i.e., if the salable percentages were

set at 100 percent). A previous price decline estimate of \$1.71 per pound was based on the 2004–2005 salable percentages (40 percent for Scotch and 36 percent for Native) published in the **Federal Register** on March 22, 2004 (69 FR 13213).

The 2003 Far West producer price for both classes of spearmint oil was \$9.50 per pound, which is below the average of \$11.33 for the period of 1980 through 2002, based on National Agricultural Statistics Service data. The surplus situation for the spearmint oil market that would exist without volume controls in 2004–2005 also would likely dampen prospects for improved producer prices in future years because of the buildup in stocks.

The use of volume controls allows the industry to fully supply spearmint oil markets while avoiding the negative consequences of over-supplying these markets. The use of volume controls is believed to have little or no effect on consumer prices of products containing spearmint oil and will not result in fewer retail sales of such products.

Based on projections available at the meetings, the Committee considered alternatives to the 8 percent increase. The Committee not only considered leaving the salable quantity and allotment percentage unchanged, but also looked at various increases ranging from 7 percent to 10 percent. The Committee reached its recommendation to increase the salable quantity and allotment percentage for Native spearmint oil after careful consideration of all available information, and believes that the level recommended will achieve the objectives sought. Without the increase, the Committee believes the industry would not be able to meet market needs.

This rule will not impose any additional reporting or recordkeeping requirements on either small or large spearmint oil handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

In addition, USDA has not identified any relevant Federal rules that duplicate, overlap or conflict with this rule.

Further, the Committee meetings were widely publicized throughout the spearmint oil industry and all interested persons were invited to attend the meetings and participate in Committee deliberations. Like all Committee meetings, the September 13, 2004, October 6, 2004, and the January 20, 2005, meetings were public meetings and all entities, both large and small,

were able to express their views on this issue.

Finally, interested persons are invited to submit information on the regulatory and informational impacts of this action on small businesses.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: <http://www.ams.usda.gov/fv/moab.html>. Any questions about the compliance guide should be sent to Jay Guerber at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

This rule invites comments on a revision to the salable quantity and allotment percentage for Native spearmint oil for the 2004–2005 marketing year. A 60-day comment period is provided. Any comments received will be considered prior to finalization of this rule.

After consideration of all relevant material presented, including the Committee's recommendation, and other information, it is found that this amended interim final rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined upon good cause that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice prior to putting this rule into effect and that good cause exists for not postponing the effective date of this rule until 30 days after publication in the **Federal Register** because: (1) This rule increases the quantity of Native spearmint oil that may be marketed during the marketing year which ends on May 31, 2005; (2) the current quantity of Native spearmint oil may be inadequate to meet demand for the remainder of the marketing year, thus making the additional oil available as soon as is practicable is beneficial to both handlers and producers; (3) the Committee unanimously recommended these changes at public meetings and interested parties had an opportunity to provide input; and (4) this rule provides a 60-day comment period and any comments received will be considered prior to finalization of this rule.

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Final rule; technical amendment.

SUMMARY: The Board of Governors is amending appendix A of Regulation CC to delete the reference to the Detroit branch office of the Federal Reserve Bank of Chicago and reassign the Federal Reserve routing symbols currently listed under that office to the head office of the Federal Reserve Bank of Cleveland and delete the reference to the Houston branch office of the Federal Reserve Bank of Dallas and reassign the routing numbers listed under that office to the head office of that Reserve Bank. These amendments will ensure that the information in appendix A accurately describes the actual structure of check processing operations within the Federal Reserve System.

DATES: The amendments to appendix A under the Fourth and Seventh Federal Reserve Districts (Federal Reserve Banks of Cleveland and Chicago) are effective on April 16, 2005. The amendments to appendix A under the Eleventh Federal Reserve District (Federal Reserve Bank of Dallas) are effective on April 23, 2005.

FOR FURTHER INFORMATION CONTACT: JACK K. WALTON II, Assistant Director (202) 452–2660, or JOSEPH P. BARESSI, Senior Financial Services Analyst (202) 452–3959, Division of Reserve Bank Operations and Payment Systems; or

ADRIANNE G. THREATT, Counsel (202) 452–3554, Legal Division. For users of Telecommunications Devices for the Deaf (TDD) only, contact (202) 263–4869.

SUPPLEMENTARY INFORMATION: Regulation CC establishes the maximum period a depository bank may wait between receiving a deposit and making the deposited funds available for withdrawal.¹ A depository bank generally must provide faster availability for funds deposited by a local check than by a nonlocal check. A check drawn on a bank is considered local if it is payable by or at a bank located in the same Federal Reserve check processing region as the depository bank. A check drawn on a nonbank is considered local if it is payable through a bank located in the same Federal Reserve check processing region as the depository bank. Checks that do not meet the requirements for local checks are considered nonlocal.

Appendix A to Regulation CC contains a routing number guide that assists banks in identifying local and nonlocal banks and thereby determining the maximum permissible hold periods for most deposited checks. The appendix includes a list of each Federal Reserve check processing office and the first four digits of the routing number, known as the Federal Reserve routing symbol, of each bank that is served by that office for check processing purposes. Banks whose Federal Reserve routing symbols are grouped under the same office are in the same check processing region and thus are local to one another.

As explained in detail in the Board's final rule published in the **Federal Register** on September 28, 2004, the Federal Reserve Banks have decided to reduce further the number of locations at which they process checks.² The amendments set forth in this notice are part of a series of appendix A amendments related to that decision, and the Board will issue separate notices for each phase of the restructuring.³

As part of the restructuring process, the Detroit branch office of the Federal

¹ For purposes of Regulation CC, the term “bank” refers to any depository institution, including commercial banks, savings institutions, and credit unions.

² See 69 FR 57837, September 28, 2004.

³ In addition to the general advance notice of future amendments provided by the Board, and the Board's notices of final amendments, the Reserve Banks are striving to inform affected depository institutions of the exact date of each office transition at least 120 days in advance. The Reserve Banks' communications to affected depository institutions are available at <http://www.frbsservices.org>.
