First-Generation Guidelines for NCI-Supported Biorepositories

AGENCY: National Institutes of Health (NIH), National Cancer Institute (NCI).

ACTION: Notice.

SUMMARY: The NCI is establishing common guidelines for the collection of biospecimens and their accompanying data by NCI-sponsored biorepositories. These guidelines are intended to standardize and enhance the quality of research material and data used in cancer research.

DATES: *Effective Date:* May 30, 2006.

ADDRESSES: These guidelines are open for public comment for a period of 30 days. After the comment period has closed, any comments received will be considered in a timely manner by the NCI Office of Biorepositories and Biospecimen Research and appropriate changes will be made and the final guidelines will be published and voluntarily in effect. After the effective

date of publication of the final guidelines, written comments will continue to be accepted for the first year of implementation and can be sent to: First-Generation Guidelines, Office of Biorepositories and Biospecimen Research, Office of the Deputy Director for Advanced Technologies and Strategic Partnerships, National Cancer Institute, National Institutes of Health, 31 Center Drive, Room 10A03, Bethesda, MD 20892. Comments submitted via e-mail should use

biospecimens@mail.nih.gov and enter "First-Generation Guidelines Comment" in the subject line. During the first year of implementation, the NCI will review any additional comments and experience with the guidelines to evaluate a possible need for future guidelines modification.

FOR FURTHER INFORMATION CONTACT: Implementation assistance and inquiries should be directed to senior staff of the relevant NCI Extramural and Intramural Program offices.

SUPPLEMENTARY INFORMATION:

I. Introduction

The guidelines assembled in this document are intended as a first step toward unifying policies and procedures for NCI-supported biorepositories. This process was initiated by the NCI through a multiyear process that began in 2002, including a 2004 report compiled for the National Cancer Advisory Board that showed substantial heterogeneity in biorepository management practices across the Institute (NCAB 2004). This study showed that NCI-supported biorepositories are not optimized in terms of operational, legal, and ethical policies and procedures, nor are they coordinated to provide a unique resource value. Specifically, it showed that:

- The NCI invests more than \$50 million annually in biorepository programs, not including biorepositories supported through individual investigator grants, such as R01s.
- The 125 programs included in the study collected, maintained, and/or stored approximately 4 million human biospecimens in FY 2003.
- These programs support basic, epidemiologic, translational, and clinical research.
- Most programs collect frozen biospecimens and support genomic and proteomic research.
- Across the broad range of programs, there are no common standard operating procedures (SOPs) or Quality Assurance/Quality Control (QA/QC) measures.

- The programs lack a common database.

- There is no consistent, defined mechanism to access NCI-supported biospecimen resources.

II. Background

In 2005 the NCI took several actions to respond to these findings, including establishment of the Biorepository Coordinating Committee (BCC) in early 2005. The BCC is advisory to the NCI's Office of Biorepositories and Biospecimen Research (OBBR). The primary purpose of the BCC is to work with the OBBR to coordinate the NCI's biorepositories in a manner that optimizes the quality and accessibility of biospecimens for the broad cancer research community. Toward this goal, the OBBR and the BCC organized two workshops during the summer of 2005 to inform the development of specific recommendations on policy and operational issues. These workshops, which were based on the development of a series of white papers that consolidated documents and the overall knowledge base in biospecimens, brought together diverse representatives from the cancer research community as well as ethics, policy, and legal experts to discuss and propose approaches that could help unify, integrate, and improve the transparency of NCI-supported biorepository activities. The report and recommendations that resulted from the workshops are summarized in the document *Harmonizing Processes and Policies for NCI-Supported Biorepositories*, which was presented to the National Cancer Advisory Board in September, 2005. The report can be found at http://biospecimens.cancer.gov/biorepositories/bcc_summary.asp.

NCI defines a biorepository as a place, room, or container where human biospecimens are stored. Biorepositories may vary considerably, ranging from formal organizations to informal collections of materials in an individual researcher's freezer.

Currently biorepositories serve as critical resources to the research community in the performance of postgenomics cancer research. It is becoming increasingly important that all biorepositories strive to achieve the best possible biospecimen quality, which would necessarily call for the adoption of consistent documentation, collection, processing, storage, and retrieval guidelines such as those outlined in this document. The workshops' recommended approaches were reported to the NCAB in September 2005. Proposed approaches, as well as additional meetings and work over the
