

exemption area. The exemption area was tested in cooperation with the FDA in the winter of 2006. No samples collected during that time were above acceptable levels for saxotoxins (80µg toxin/100g of shellfish). In order for the proposed EFP to be issued, the applicant would be required to obtain an endorsement from the state in which it intends to land the product harvested under the EFP. The initial application, submitted on March 30, 2006, only listed Massachusetts as a possible state for landing the product. The revised application includes the initial preferred state of landing, Massachusetts, as well as Rhode Island, New Jersey, and Delaware as possible states where shellfish harvested under the EFP could be landed. Each state would be required to endorse and/or otherwise explicitly permit the F/V Seawatcher to land product harvested under the conditions of the EFP in order for the EFP to be valid, as each state is responsible for regulating the molluscan shellfish industry within its jurisdiction and ensuring the safety of shellfish harvested within or entering its borders. This EFP would allow for an exemption from the Atlantic surfclam and ocean quahog GB Closure Area specified at 50 CFR 648.73(a)(4).

During the comment period for the initial proposed EFP, NMFS received five comments. One comment was against the concept of the EFP in general. Three comments were opposed to the issuance of the EFP until concerns regarding the dockside sampling protocol could be resolved. One comment, from the Massachusetts Division of Marine Fisheries, was in support of the comments regarding the dockside sampling protocol submitted by the Massachusetts Department of Public Health. Although adherence to the dockside monitoring protocol would be a condition of the EFP, NMFS is not the author of the protocol, nor the Federal agency responsible for matters of public health, thus NMFS defers response to issues regarding the dockside monitoring protocol to the FDA. However, since the initial public notification of this EFP, the FDA has amended the Protocol in response to concerns raised by state shellfish control authorities. The Protocol and the pilot project that would be authorized by this EFP have also since been endorsed by the executive board of the Interstate Shellfish Sanitation Conference.

Permits Issued

Permit 1045 Modification 1 was issued to M. Fawcett on October 30, 2006, authorizing capture (by seine), handling, sampling and marking (by collection of fin-clips), and release of juvenile Central California Coast coho salmon, California Coastal Chinook salmon, Northern California steelhead, and Central California Coast steelhead. Permit 1045 Modification 1 is for research to be conducted in the Russian River and Salmon Creek watersheds in Sonoma County, California, as well as numerous coastal streams between Gualala River and Estero Americano in Sonoma County, California. Permit 1045 Modification 1 does not authorize take of adult ESA-listed salmonids or intentional lethal take of ESA-listed salmonids. Permit 1045 Modification 1 authorizes unintentional lethal take of juvenile ESA-listed salmonids associated with research activities not to exceed 1 percent of ESA-listed salmonids captured. The purpose of the research is to provide scientific information on the ecology, distribution, population genetics, and population abundance of Central California Coast coho salmon, California Coastal Chinook salmon, Northern California steelhead, and Central California Coast steelhead. Permit 1045 Modification 1 expires on February 28, 2012.

Permit 1046 Modification 2 was issued to NPS on October 30, 2006, authorizing capture (by pipe-trap, fyke-net trap, electrofishing, dip-net, or seine), handling, sampling (by collection of fin-clips, scales, or stomach contents), marking (using fin-clips, fin dye, passive integrated transponder (PIT) tags, or visible implant elastomer (VIE) tags), and release of juvenile Central California Coast coho salmon, California Coastal Chinook salmon, and Central California Coast steelhead; and capture (by weir-trap), handling, marking (using spaghetti-tags), and release of adult Central California Coast coho salmon, California Coastal Chinook salmon, and Central California Coast steelhead.

Permit 1046 Modification 2 also authorizes NPS to capture, handle, sample (by collection of scales, fin-clips, or other tissue), mark, and release adult carcasses of Central California Coast coho salmon, California Coastal Chinook salmon, and Central California Coast steelhead. Permit 1046 Modification 2 is for research to be conducted in the following watersheds within or proximate to NPS lands: Olema Creek, Lagunitas Creek, Pine Gulch, Redwood Creek, and Easkoot Creek in Marin County, California; West Union Creek, Martini Creek, San Vicente Creek, and Denniston Creek in San Mateo County, California; and Alhambra Creek and Franklin Creek in Contra Costa County, California.
