AGENCY: Environmental Protection
Agency.

ACTION: Notice of External Review Draft
for Public Review and Comment.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is announcing a 30-day public review and comment period for the external review draft of Part 1 of the 2007 release of the EPA Web site titled, "Causal Analysis/Diagnosis Decision Information System (CADDIS)." The CADDIS Web site was developed and prepared by EPA's National Center for Environmental Assessment (NCEA) in the Office of Research and Development (ORD). NCEA will consider public comments received in accordance with this notice when revising the CADDIS Web site. Review of Part 2 of CADDIS 2007 will be announced in the Spring of 2007.

EPA is releasing the draft CADDIS 2007 Web site solely for the purpose of pre-dissemination peer review under applicable information quality guidelines. The draft CADDIS 2007 Web site has not been formally disseminated by EPA. It does not represent and should not be construed to represent any Agency policy or determination. EPA will consider any public comments submitted in accordance with this notice when revising the document.

SUPPLEMENTARY INFORMATION:

I. Information About the Project/ Document

Over a thousand water bodies in the United States are listed by states as biologically impaired. For many of these sites, the cause of impairment is reported as "unknown." To formulate appropriate management actions for impaired water bodies, it is important to identify the causes of biological impairment (e.g., excess fine sediments, nutrients, or toxic substances). Effective causal analyses call for knowledge of the mechanisms, symptoms, and stressor-response relationships for various stressors, as well as the ability to use that knowledge to draw appropriate, defensible conclusions. To aid in these causal analyses, NCEA developed CADDIS. CADDIS is a Web-based decision support system that will help regional, state, and tribal scientists find, access, organize, and share information useful for causal evaluations of impairment in aquatic systems. It is based on EPA's Stressor Identification process, which is an EPA-recommended method for identifying causes of impairments in aquatic environments. EPA released the first version of CADDIS earlier in 2006, after addressing comments from the public and independently selected peer reviewers. Current features of CADDIS include a step-by-step guide to conducting causal analysis, downloadable worksheets and examples, a library of conceptual models, and links to useful information sources. Additional information is being added to the CADDIS Web site in preparation for release of a major revision in September 2007. The review announced here is the first of two sets of modules added to the CADDIS Web site. Specifically, comment is invited on information on six candidate causes:

metals, sediments, nutrients, dissolved oxygen, thermal alteration, and ionic strength. Since its release, CADDIS has become a valuable resource for EPA, state, tribal, and local risk assessors. CADDIS 2007 will add more capabilities to this already important diagnostic tool.
