In plants and plant products, the residue of concern parent clothianidin can be determined using high performance liquid chromatography (HPLC) with electrospray tandem mass spectrometry (MS/MS) detection. In an extraction efficiency testing, the plant residues method has also demonstrated the ability to extract aged clothianidin residue. Although the plant residues LC-MS/MS method is highly suitable for enforcement method, an L C-Ultraviolet (UV) method has also been developed which is suitable for enforcement monitoring purposes in all relevant matrices.
