Title: Regulation of Fuels and Fuel Additives: Gasoline Volatility (Renewal).

ICR numbers: EPA ICR No. 1367.08, OMB Control No. 2060-0178.

ICR Status: This ICR is scheduled to expire on January 31, 2008. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: Gasoline volatility, as measured by Reid Vapor Pressure (RVP) in pounds per square inch (psi), is controlled in the spring and summer in order to minimize evaporative hydrocarbon emissions from motor vehicles. RVP is subject to Federal standard of 7.8 psi or 9.0 psi, depending on location. The addition of ethanol to gasoline increases the RVP by about 1 psi.

Gasoline that contains at least 9 volume percent ethanol is subject to a standard that is 1.0 psi greater. As an aid to industry compliance and EPA enforcement, the product transfer document which is prepared by the producer or importer and which accompanies a shipment of gasoline containing ethanol, is required by regulation to contain a legible and conspicuous statement that the gasoline contains ethanol and the percentage concentration of ethanol. This is intended to deter the mixing within the distribution system, particularly in retail storage tanks, of gasoline which contains ethanol with gasoline which does not contain ethanol. Such mixing would likely result in a gasoline with an ethanol concentration of less than 9 volume percent but with an RVP above the standard. Also, a party wishing a testing exemption for research on gasoline that is not in compliance with the applicable volatility standard must submit certain information to EPA.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 5 seconds per response. Burden means the total time, effort, or financial resources expended

by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Parties which produce or import gasoline containing ethanol, and parties seeking a testing exemption.

Estimated Number of Respondents: 2,000.

Frequency of Response: On occasion.

Estimated Total Annual Hour Burden: 13,997.

Estimated Total Annual Cost: \$916,845, includes \$20 in annualized capital or O&M costs.

Changes in the Estimates: There is an increase of 7,550 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase reflects EPA's updating of burden estimates. The increase is due to an increase in the use of ethanol in gasoline due to (1) the discontinued use of methyl tertiary butyl ether in gasoline and (2) the renewable fuels requirements which recently took effect.
