Administration on Aging

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Semi-Annual and Final Reporting Requirements for the Older Americans Act Title IV Discretionary Grants Program

AGENCY: Administration on Aging, HHS.

ACTION: Notice.

SUMMARY: The Administration on Aging (AoA) is announcing that the proposed collection of information listed below has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments on the collection of information by July 6, 2009.

Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The health burden of Intimate Partner Violence (IPV), Sexual Violence (SV) and stalking are substantial. Approximately 1.5 million women and 834,700 men are raped and/or physically assaulted by an intimate partner each year. Women are more likely than men to be victimized by almost every type of IPV, including rape, physical assault, and stalking by a current or former intimate partner. The health care costs of IPV exceed \$5.8 billion each year, nearly \$3.9 billion of which is for direct medical and mental health care services.

SV also has a profound and long-term impact on the physical and mental health of the victim. Existing estimates of lifetime experiences of rape range from 15% to 36% for females. Sexual violence against men, although less prevalent, is also a public health problem; approximately, 1 in 6 women and 1 in 33 men have experienced an

attempted or completed rape in their lifetime. Over 302,000 women and 92,000 men were raped in the past 12 months. Thirty percent of rape victims experience major depressions at some time in their lives; 33% of victimized women and 24.2% of victimized men are counseled by a health professional; 31% develop post traumatic stress disorder; 33% contemplate suicide; and 13% attempt suicide.

Each year, approximately 1 million women and 371,000 men in the United States are stalked. There is a strong link between stalking and other forms of violence in intimate relationships; 81% of women who were stalked by a current or former intimate partner were also physically assaulted by that partner and 31% were sexually assaulted by that partner. Furthermore, 76% of female victims of intimate partner homicides were stalked by their partners before they were killed.

Currently, the United States lacks a national data source that systematically and routinely collects valid and reliable information on the magnitude and

trends in IPV, SV and stalking. Such a system is needed to (1) help formulate public policies and prevention strategies related to IPV, SV and stalking; (2) guide and evaluate progress in reducing the huge health and social burden associated with IPV, SV and stalking; and (3) improve the effectiveness of federal agencies responding to IPV, SV and stalking.

In order to address this important public health problem, CDC plans to develop a national surveillance system that will generate national and state level estimates of IPV, SV and stalking. A total of 73,318 eligible households will be screened; out of the households screened approximately 38,318 will not consent or agree to participate and 35,000 will complete the survey each year. The survey will be conducted among English and/or Spanish speaking male and female adults (18 years and older) living in the United States.

There are no costs to respondents other than their time. The total estimated annual burden hours are 18,249.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Form name	Number of responses	Number of responses per respondent	Average burden per response (in hours)
Households	Screened	73,318	1	3/60
	Surveyed	35,000	1	25/60
