k. This application has been accepted for filing and is now ready for environmental analysis.

l. *The Project Description*: The Claytor Project consists of: (1) A 1,142-foot-long, 137-foot-high concrete gravity dam; (2) a 4,472-acre reservoir with a storage capacity of 225,000 acre-feet at normal pool elevation 1,846.0 feet National Geodetic Vertical Datum (NGVD); (3) four 16-foot-diameter penstocks; (4) a powerhouse integral with the dam containing four generating units with a combined capacity of 75 megawatts; (5) a 1,000-foot-long transmission line; and (6) switching and appurtenant equipment.

The applicant proposes to expand its current levelized flow mode whereby releases from the project approximate inflows to the project over a 24-hour period from April 15 through October 15 to April 1 through November 30. Reservoir levels would continue to be maintained between 1,845 feet NGVD and 1,846 feet NGVD and a minimum average hourly flow of 750 cubic feet per second (cfs), or inflow, whichever is less, would be provided downstream of the project. The applicant would also modify the current period for peaking operations from October 16 through April 14 to December 1 through March 31 and increase its minimum average hourly downstream flow from 750 cfs to 1,000 cfs, or inflow, whichever is less. During this period, the applicant would extend the time to ramp down during peaking operations from 15 minutes to 30 minutes but continue to bring units on line in 15 minute intervals to meet system demands. Reservoir levels would be maintained between 1,844 feet NGVD and 1,846 feet NGVD. In addition, the applicant would eliminate the current winter drawdown to protect aquatic resources including State-listed mussel populations. For recreation purposes, the applicant is proposing to provide weekend releases of 1,000 cfs when

inflow falls below 1,000 cfs but is above 800 cfs and would provide recreation releases for the annual squirt boat competition each May.
