

observed horseshoe crabs were found 1 to 8 years after release, primarily along the Delaware Bay shores during their spawning season.

Proposed 2011 EFP

Limuli Laboratories proposes to conduct an exempted fishery operation using the same means, methods, and seasons proposed/utilized during the EFPs in 2001–2010. Limuli proposes to continue to tag at least 15 percent of the bled horseshoe crabs as they did in 2010. NMFS would require that the following terms and conditions be met for issuance of the EFP:

1. Limiting the number of horseshoe crabs collected in the Reserve to no more than 500 crabs per day and to a total of no more than 10,000 crabs per year;

2. Requiring collections to take place over a total of approximately 20 days during the months of July, August, September, October, and November. (Horseshoe crabs are readily available in harvestable concentrations nearshore earlier in the year, and offshore in the Reserve from July through November);

3. Requiring that a 5½ inch (14.0 cm) flounder net be used by the vessel to collect the horseshoe crabs. This condition would allow for continuation of traditional harvest gear and adds to the consistency in the way horseshoe crabs are harvested for data collection;

4. Limiting trawl tow times to 30 minutes as a conservation measure to protect sea turtles, which are expected to be migrating through the area during the collection period, and are vulnerable to bottom trawling;

5. Requiring that the collected horseshoe crabs be picked up from the fishing vessels at docks in the Cape May Area and transported to local laboratories, bled for LAL, and released alive the following morning into the Lower Delaware Bay; and

6. Requiring that any turtle take be reported to NMFS, Northeast Region, Assistant Regional Administrator of Protected Resources Division, within 24 hours of returning from the trip in which the incidental take occurred.

As part of the terms and conditions of the EFP, for all horseshoe crabs bled for LAL, NMFS would require that the EFP holder provide data on sex ratio and daily harvest. Also, the EFP holder would be required to examine at least 200 horseshoe crabs for morphometric data. Terms and conditions may be added or amended prior to the issuance of the EFP.

The proposed EFP would exempt two commercial vessels from regulations at 50 CFR 697.7(e) and 697.23(f), which prohibit the harvest and possession of

horseshoe crabs from the Reserve on a vessel with a trawl or dredge gear aboard.
