

will have a negligible impact on the affected species or stocks of marine mammals; and that impacts to affected species or stocks of marine mammals have been mitigated to the lowest level practicable.

#### **Impact on Availability of Affected Species or Stock for Taking for Subsistence Uses**

Marine mammals are hunted legally in Alaska waters by coastal Alaska Natives. In the GOA, the marine mammals under NMFS jurisdiction that are hunted are Steller sea lions and harbor seals. In 2007, a total of 1,428 harbor seals were taken by Alaska Natives (Wolfe *et al.*, 2009); 654 were taken from the southeast Alaska stock, 686 were taken from the GOA stock, and 88 were taken from the Bering Sea stock (Allen and Angliss, 2010). In 2008, 1,462 harbor seals were taken by Alaska Natives (Wolfe *et al.*, 2009). Most harbor seals were taken by communities in southeast Alaska (594), the North Pacific rim (277), Kodiak Island (192), and the South Alaska Peninsula (125; Wolfe *et al.*, 2009). The seasonal distribution of harbor seal takes by Alaska Natives typically shows two distinct hunting peaks—one during spring and one during all and early winter; however, this pattern was hardly noticeable in 2008 (Wolfe *et al.*, 2009). In general the months of highest harvest are September through December, with a smaller peak in March. Harvests are traditionally low from May through August, when harbor seals are raising pups and molting.

In 2007, a total of 217 Steller sea lions were taken by Alaska Natives, excluding St. Paul Island (Wolfe *et al.*, 2009); 211 were from the western stock and 6 were from the eastern stock (Allen and Angliss, 2010). In 2008, 146 sea lions were taken by Alaska Natives (Wolfe *et al.*, 2009). Most sea lions were taken by communities in the Aleutian Islands (48) and the Pribilof Islands (36); 25 were taken in the North Pacific Rim, 19 in the Kodiak Island region, 10 in southeast Alaska, and 9 along the South Alaska Peninsula (Wolfe *et al.*, 2009).

The project could potentially impact the availability of marine mammals for harvest in a very small area immediately around the *Langseth*, and for a very short time period during seismic activities. Considering the limited time and locations for the planned seismic survey, the project is not expected to have any significant impacts to the availability of Steller sea lions and harbor seals for subsistence harvest.

Section 101(a)(5)(D) also requires NMFS to determine that the authorization will not have an unmitigable adverse effect on the

availability of marine mammal species or stocks for subsistence use. Based on the information above, subsistence uses of marine mammals in the study area (waters of the western GOA) that implicate MMPA section 101(a)(5)(D) are not expected to be impacted.

#### **Endangered Species Act**

Of the species of marine mammals that may occur in the survey area, several are listed as endangered under the ESA, including the North Pacific right, humpback, sei, fin, blue, and sperm whales, as well as the Cook Inlet DPS of beluga whales and the western stock of Steller sea lions. The eastern stock of Steller sea lions is listed as threatened. Critical habitat for the North Pacific right whale and Steller sea lion is also found within the GOA. Under section 7 of the ESA, NSF has initiated formal consultation with the NMFS, Office of Protected Resources, Endangered Species Division, on this seismic survey. NMFS's Office of Protected Resources, Permits, Conservation and Education Division, has initiated formal consultation under section 7 of the ESA with NMFS's Office of Protected Resources, Endangered Species Division, to obtain a Biological Opinion (BiOp) evaluating the effects of issuing the IHA on threatened and endangered marine mammals and, if appropriate, authorizing incidental take. In June 2011, NMFS issued a BiOp and concluded that the action and issuance of the IHA are not likely to jeopardize the continued existence of North Pacific right, humpback, sei, fin, blue, and sperm whales, Cook Inlet DPS of beluga whales, and Steller sea lions. The BiOp also concluded that designated critical habitat for these species would not be affected by the survey. NSF and L-DEO must comply with the Relevant Terms and Conditions of the Incidental Take Statement (ITS) corresponding to NMFS's BiOp issued to NSF, L-DEO, and NMFS's Office of Protected Resources. L-DEO must also comply with the mitigation and monitoring requirements included in the IHA in order to be exempt under the ITS in the BiOp from the prohibition on take of listed endangered marine mammal species otherwise prohibited by section 9 of the ESA.

#### **National Environmental Policy Act (NEPA)**

To meet NMFS's NEPA (42 U.S.C. 4321 *et seq.*) requirements for the issuance of an IHA to L-DEO, NSF prepared an "Environmental Assessment on a Marine Seismic Survey in the Gulf of Alaska, July–August 2011," which incorporated an

"Environmental Assessment of a Marine Geophysical Survey by the R/V *Marcus G. Langseth* in the western Gulf of Alaska, July–August 2011," prepared by LGL. NMFS conducted an independent review and evaluation of the document for sufficiency and compliance with the Council on Environmental Quality regulations and NOAA Administrative Order (NAO) 216–6 § 5.09(d) and determined that issuance of the IHA is not likely to result in significant impacts on the human environment. Consequently, NMFS has adopted NSF's EA and prepared a Finding of No Significant Impact (FONSI) for the issuance of the IHA. An Environmental Impact Statement is not required and will not be prepared for the action.

#### **Authorization**

NMFS has issued an IHA to L-DEO for the take, by Level B harassment, of small numbers of marine mammals incidental to conducting a marine geophysical survey in the western GOA, June to August, 2011, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.
