Title: Superfund Site Evaluation and Hazard Ranking System (Renewal).

ICR Numbers: EPA ICR No. 1488.08, OMB Control No. 2050-0095.

ICR Status: This ICR is scheduled to expire on July 31, 2011. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a

currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: Section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, 1980 and 1986) amended the National Oil and Hazardous Substances Contingency Plan (NCP) to include criteria prioritizing releases throughout the U.S. before undertaking remedial action at uncontrolled hazardous waste sites. The Hazard Ranking System (HRS) is a model that is used to evaluate the relative threats to human health and the environment posed by actual or potential releases of hazardous substances, pollutants, and contaminants. The HRS criteria take into account the population at risk, the hazard potential of the substances, as well as the potential for contamination of drinking water supplies, direct human contact, destruction of sensitive ecosystems, damage to natural resources affecting the human food chain, contamination of surface water used for recreation or potable water consumption, and contamination of ambient air.

EPA Regional offices work with States to determine those sites for which the State will conduct the Superfund site evaluation activities and the HRS scoring. The States are reimbursed 100 percent of their costs, except for record maintenance.

Under this ICR, the States will apply the HRS by identifying and classifying those releases or sites that warrant further investigation. The HRS score is crucial since it is the primary mechanism used to determine whether a site is eligible to be included on the National Priorities List (NPL). Only sites on the NPL are eligible for Superfund-financed remedial actions.

HRS scores are derived from the sources described in this information collection, including conducting field reconnaissance, taking samples at the site, and reviewing available reports and documents. States record the collected information on HRS documentation worksheets and include this in the supporting reference package.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 214 hours per

response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: States (including U.S. Territories) and Indian Tribes.

Estimated Number of Respondents: 60.

Frequency of Response: 9 to 10 responses per year.

Estimated Total Annual Hour Burden: 121,681.

Estimated Total Annual Cost: \$11,238,970, includes \$1,869,270 annualized capital or O&M costs, however all these costs are reimbursed by the Federal Government through cooperative agreements, resulting in no net cost to respondents for this ICR.

Changes in the Estimates: There is a decrease of 27,192 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This decrease is primarily due to a reduction in the number of total activities to be performed by respondents combined with a decline in related infrastructure costs. This change reflects an adjustment to the estimated burden.

Dated: July 20, 2011.
