n. The project would be located at an existing dam currently owned by Monroe County. The dam was built in 1854, and acquired in the 1920s by Northern States Power who rebuilt, owned, and operated a hydroelectric project at that location until it was abandoned and the generating equipment was removed, in 1969. In 1998, Monroe County rehabilitated the dam and installed new Tainter gates with cable drum hoists.

The existing Angelo dam is an earthen embankment with a maximum height of 14 feet and a total length of 507 feet. The spillway is constructed of reinforced concrete and consists of four, 13.5-foot-wide by 11.4-foot-high bays with 13.5-foot-wide by approximately 7-foot-high steel tainter gates. The existing reservoir has a surface area of 52 acres, normally stores approximately 140 acre-feet at the spillway crest elevation, and has a normal operating range from 793 to 793.6 feet above mean sea level (msl). The maximum storage capacity is 450 acre-feet (based on an elevation of 796 feet msl at the top of the dam). The project would operate in a run-of-river mode and generate power using flows between 168 cubic feet per second (cfs) and 64 cfs. Flows greater than 168 cfs would be spilled.
