III. Background

FEMA maps flood hazards on Flood Insurance Rate Maps, a tool used to support the National Flood Insurance Program. These maps identify areas that are flood prone for a variety of reasons. One unique category of flood hazards is the areas behind levees. Levees can be recognized as providing protection on FEMA's flood maps if they meet all requirements of 44 CFR 65.10, the regulations that define the design,

maintenance and operation standards specifically for this purpose. Levees meeting all aspects of 44 CFR 65.10 are considered eligible to be accredited. Those that cannot meet all of these standards cannot be accredited.

The current approach for analyzing and mapping flood hazards associated with non-accredited levees is a singular approach where one technical procedure applies to all non-accredited levees. The feedback on this one-size-all approach is that it does not take the unique conditions of each levee into consideration. Many stakeholders also believe this approach does not adequately reflect the ability of these levees to provide some level of flood hazard reduction.

FEMA is listening to this stakeholder feedback that this current approach used to map flood hazards associated with non-accredited levees is too coarse to represent the variety of situations associated with levees. In response, FEMA has worked to revise the mapping procedures for non-accredited levees. This approach works within the confines of existing federal regulations, yet is more flexible, collaborative and feasible.

FEMA is replacing the former, singular approach with a suite of procedures that are technically sound, understandable to stakeholders, and cost effective. This suite of procedures will better meet the needs of the public and provide more precise results, while at the same time recognizing that uncertainty will remain. While these procedures allow for more detailed modeling and mapping of flood hazards for non-accredited levee systems, the risk of flooding in levee-impacted areas remains. Therefore, levee system owners and communities still need to remain engaged in flood risk management and communication activities.

IV. Request for Comments

FEMA welcomes your comments, questions, and concerns regarding the proposed approach's technical clarity, potential local impact, and feasibility for community participation. FEMA also welcomes any suggestions for improvement to the proposed approach.
