k. *Description of the Application*: After receiving Forest Service approval on July 18, 2012, PG&E filed a shoreline management plan (SMP) for Pinecrest Lake pursuant to a mandatory requirement of the Forest Service's section 4(e) condition No. 29, which was included as part of the license for the Spring Gap-Stanislaus Hydroelectric Project. The Forest Service, which owns and manages all of the shoreline lands at Pinecrest Lake as part of the Stanislaus National Forest, required the SMP as a sub-plan under condition No. 29 (Recreation Facilities and Administration) to manage the reservoir shoreline at Pinecrest Lake and to address privately owned boat docks and mooring balls, and include zoning of

certain sections of shoreline for swimming, fishing, and shoreline boat access.

Since all of the shoreline at Pinecrest Lake is owned and managed by the Forest Service, the Commission has no authority to dictate how the SMP is to be implemented. As such, the Commission views PG&E's filing as informational and will not take action on it. Any comments on the SMP should be directed to the Forest Service.

KC Scoby Hydro, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On June 11, 2012, KC Scoby Hydro, LLC, filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of hydropower at the existing Scoby Dam located on Cattaraugus Creek in Erie County, New York. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed Scoby Dam Hydroelectric Project would redevelop an abandoned project and would consist of the following: (1) An existing 338-foot-long and 40-foot-high ogee-shaped concrete gravity dam with a 183-foot-long spillway; (2) an existing impoundment having a surface area of 22 acres and a storage capacity of 52 acre-feet at an elevation of 1,080 feet mean sea level (msl); (3) a new powerhouse with two new identical turbine-generator units with an installed capacity of 500 kilowatts each; (4) a new 480-volt, approximately 1-mile-long transmission line extending from the powerhouse to an existing three-phase line; and (5) appurtenant facilities. The proposed project would have an annual generation of 6.5 gigawatt-hours.
