SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau presently operates a generic clearance covering activities involving respondent burden associated with updating our Master Address File (MAF) and Topologically Integrated Geographic Encoding and Referencing (TIGER) Database (MTdb). The MTdb is the Census Bureau's integrated address geographic database. We now propose to extend the generic clearance to cover update activities we will undertake during the next three fiscal years.

Under the terms of the generic clearance, we plan to submit a request for OMB approval that will describe, in general terms, all planned activities for the entire period. We will provide information to OMB at least two weeks before the planned start of each activity giving more exact details, examples of forms, and final estimates of respondent burden. We also will file a year-end summary with OMB after the close of each fiscal year giving results of each activity conducted. The generic clearance enables OMB to review our overall strategy for MTdb updating in advance, instead of reviewing each activity in isolation shortly before the planned start.

The Census Bureau used the addresses in the MTdb for mailing and delivering questionnaires to households during the 2010 Census and will do so for the 2020 Census. These addresses are also used as a sampling frame for our demographic current surveys. Prior to Census 2000, the Census Bureau built a new address list for each decennial census. The MTdb built for the 2010 Census is designed to be kept up-to-date, thereby eliminating the need to develop a completely new address list for future censuses and surveys. The Census Bureau plans to use the MTdb
