For users that are not networked, they must call, tell face-to-face or send an encrypted email to an operator to have their information loaded into the database or the information is provided to an operator via their organization's roster update which users have consented to provide.

The system data is encrypted both at rest and in transit. Firewalls protect the DoD networks and the system uses Secured Sockets Layer (SSL) with Public Key Infrastructure (PKI) certificates in the data transfer protocols for encryption.

Administratively PFPA regularly monitors the users' security practices to ensure only authorized users have access to PII.
