Energy Conservation Program for Consumer Products: Test Procedure for Portable Air Conditioners

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notice of data availability; request for comment.

SUMMARY: In a notice of proposed determination (NOPD) published on July 5, 2013, the U.S. Department of Energy (DOE) tentatively determined that portable air conditioners (ACs) qualify as a covered product under Part B of Title III of the Energy Policy and Conservation Act (EPCA), as amended. To assist in a final determination and to consider approaches for a future DOE test procedure for these products, should DOE determine that portable ACs are covered products, DOE conducted investigative testing to evaluate industry test procedures that could be used to measure cooling capacity and energy use for portable ACs. In today's notice, DOE discusses various industry test procedures and presents results from its investigative testing that evaluated existing methodologies and alternate approaches adapted from these methodologies for portable ACs. DOE requests comment and additional information regarding the testing and results presented in this NODA. DOE also encourages interested parties to provide comment on any alternate approaches for testing portable ACs and information that may improve the analysis.

DATES: DOE will accept comments, data, and information regarding this notice of data availability (NODA) submitted no later than June 9, 2014.

I. Authority and Background

Title III, Part B¹ of the Energy Policy and Conservation Act of 1975 (EPCA), Public Law 94-163, (42 U.S.C. 6291-6309, as codified), sets forth a variety of provisions designed to improve energy efficiency and established the Energy Conservation Program for Consumer Products Other Than Automobiles, a program covering most major household appliances (hereinafter referred to as "covered products").² In addition to specifying a list of covered products, EPCA contains provisions that enable the Secretary of Energy to classify additional types of consumer products as covered products. For a given product to be classified as a covered product, the Secretary must determine that:

- (1) Classifying the product as a covered product is necessary for the purposes of EPCA; and
- (2) The average annual per-household energy use by products of such type is likely to exceed 100 kilowatt-hours (kWh) per year. (42 U.S.C. 6292(b)(1)).

In order to prescribe an energy conservation standard pursuant to 42 U.S.C. 6295(o) and (p) for covered products added pursuant to 42 U.S.C. 6292(b)(1), the Secretary must also determine that:

- (1) The average household energy use of the products has exceeded 150 kWh per household for any 12-month period ending before such determination;
- (2) The aggregate household energy use of the products has exceeded 4.2 terawatt-hours (TWh) for any such 12-month period;
- (3) Substantial improvement in energy efficiency is technologically feasible; and

¹ For editorial reasons, upon codification in the U.S. Code, Part B was re-designated Part A.

² All references to EPCA in this document refer to the statute as amended through the American Manufacturing Technical Corrections Act (AEMTCA), Public Law 112-210 (Dec. 18, 2012).
