

under an individual permit or an appropriate general permit.

The permit also contains BTA requirements for cooling water intake structures for facilities that withdraw less than 1 MGD of surface water for non-contact cooling in order to ensure source water protection. For facilities that use groundwater or municipal drinking water for non-contact cooling, the permit establishes effluent limitations and/or additional monitoring for expected constituents (metals and residual chlorine, respectively).

#### II. Background

EPA has granted emergency exemptions to the following State and Federal agencies. The emergency exemptions may take the following form: Crisis, public health, quarantine, or specific.

Under FIFRA section 18, EPA can authorize the use of a pesticide when emergency conditions exist. Authorizations (commonly called

emergency exemptions) are granted to State and Federal agencies and are of four types:

1. A “specific exemption” authorizes use of a pesticide against specific pests on a limited acreage in a particular State. Most emergency exemptions are specific exemptions.

2. “Quarantine” and “public health” exemptions are emergency exemptions issued for quarantine or public health purposes. These are rarely requested.

3. A “crisis exemption” is initiated by a State or Federal agency (and is confirmed by EPA) when there is insufficient time to request and obtain EPA permission for use of a pesticide in an emergency.

EPA may deny an emergency exemption: If the State or Federal agency cannot demonstrate that an emergency exists, if the use poses unacceptable risks to the environment, or if EPA cannot reach a conclusion that the proposed pesticide use is likely to result in “a reasonable certainty of no harm” to human health, including exposure of residues of the pesticide to infants and children.

If the emergency use of the pesticide on a food or feed commodity would result in pesticide chemical residues, EPA establishes a time-limited tolerance meeting the “reasonable certainty of no harm standard” of the Federal Food, Drug, and Cosmetic Act (FFDCA).

In this document: EPA identifies the State or Federal agency granted the exemption, the type of exemption, the pesticide authorized and the pests, the crop or use for which authorized, and the duration of the exemption.

Kasugamycin is needed to control streptomycin-resistant strains of *Erwinia amylovora*, the causal pathogen of fire blight, due to the lack of available alternatives and effective control practices. Without the use of kasugamycin and if weather conditions are present which favor a fire blight epidemic, it is likely that Michigan apple growers could suffer yield losses of 50% or more.
