

Region 10 has employed a conservative analysis of adverse effects.

Known compensatory mitigation techniques are unlikely to offset impacts of the nature and magnitude described in the proposed restrictions. Compensatory mitigation is the concept of improving stream or wetland health in other parts of the watershed to compensate for stream or wetland destruction or degradation in a separate area. Compensatory mitigation efforts typically involve restoration and enhancement of waters that have potential for improvement in ecological services. However, the waters of the Bristol Bay watershed are already among the most productive in the world. EPA Region 10 sees little likelihood that human activity could improve upon the high quality natural environment in the Bristol Bay watershed that nature has created and has thus far been preserved. Compensation methods proposed by PLP, including placement of in-stream structures, stream fertilization, and construction of spawning channels, have typically had only variable, local, or temporary effects, were designed for use in degraded watersheds, or resulted in adverse, unintended consequences (USEPA 2014: Appendix J).

Mine alternatives with lower environmental impacts at the Pebble deposit are not evaluated in either the Bristol Bay Assessment or this section 404(c) proposed determination. If these proposed restrictions are finalized, proposals to mine the Pebble deposit that have impacts below each of these restrictions would proceed to the section 404 permitting process with the U.S. Army Corps of Engineers. Any such proposals would have to meet the statutory and regulatory requirements for permitting under section 404.

After evaluating available information, EPA Region 10 has reason to believe that unacceptable adverse effects on fishery areas (including spawning and breeding areas) could result from the discharge of dredge or fill material associated with mining the Pebble deposit. Further, it has not been demonstrated to the satisfaction of EPA Region 10 that no unacceptable adverse effect(s) will occur.

EPA Region 10 is soliciting public comment on all issues discussed in this proposed determination, including likely adverse impacts to fishery resources, mitigation measures to potentially address these impacts, and other options to restrict or prohibit potentially harmful discharges of dredged or fill material associated with mining the Pebble deposit. All comments will be fully considered as

EPA Region 10 decides whether to withdraw the proposed determination or forward to EPA Headquarters a recommended determination to restrict the use of certain waters in the SFK, NFK, and UTC watersheds in southwest Alaska as disposal sites for the discharge of dredged or fill material associated with mining the Pebble deposit. Should EPA Region 10 make a recommended determination, EPA Headquarters will then determine, based on the recommended determination, public comments received on the proposed determination, and all other available, relevant information, whether to issue a final determination under section 404(c).

## II. Solicitation of Comments on the Proposed Determination

Please see the section above entitled **ADDRESSES** for information about how to obtain a copy of the proposed determination and how to submit comments on the proposed determination. EPA Region 10 is soliciting comments on all issues discussed in the proposed determination. In particular, we request:

(1) Comments regarding whether the proposed determination should become the recommended determination and ultimately the final determination, and corrective action that could be taken to reduce the adverse impact of the discharges.

(2) Additional information on the likely adverse impacts on fish and other ecological resources of the receiving waters that would be directly or indirectly affected by mining the Pebble deposit (including the SFK, NFK, and UTC and downstream reaches of the Nushagak and Kvichak Rivers).

(3) Additional information on the water quality, flora, fauna, and hydrology of the waters identified in No. 2 above, and information on the fish species that would be affected by aquatic ecosystem changes if the discharges from the project occur.

(4) Additional information about wildlife species that would be affected if the discharges from the project occur.

(5) Additional information about recreational uses of the project area and how they would be impacted if the discharges from the project occur.

(6) Additional information about drinking water (including municipal water supplies and private sources of drinking water such as streams and/or wells) and how they would be impacted if the discharges from the project occur.

(7) Additional information on the potential for mitigation to be successful in reducing the impacts of the project.

(8) Comments regarding the approach used to define the potential disposal site, including how EPA Region 10 weighed the factors discussed in section 2.2.3 and whether there are other factors or approaches EPA Region 10 should consider for defining the potential disposal site.

(9) Whether the discharge of dredged or fill material associated with the project should be completely prohibited, restricted as proposed, restricted in another manner, or not restricted at all at this time. In particular, EPA Region 10 is also seeking comment on whether environmental effects associated with other mine stages or scenarios (e.g. environmental effects from mining approximately 2.0 billion tons of ore over 25 years) could provide a basis for alternative or additional restrictions.

(10) Comment on the definitions provided in Section 5.

(11) Comment on whether and how EPA Region 10's action under section 404(c) should consider discharge of dredged or fill materials beyond those associated with the mine pit, tailings dam, and waste rock piles, to include such discharges associated with the construction of other mine infrastructure (e.g., wastewater treatment facilities, transportation corridors, etc.).

All relevant data, studies, or informal observations are appropriate. The record will remain open for comments until September 19, 2014. All comments will be fully considered as EPA Region 10 decides whether to withdraw the proposed determination or forward to EPA Headquarters a recommended determination to restrict the use of certain waters in the SFK, NFK, and UTC watersheds in southwest Alaska as disposal sites for the discharge of dredged or fill material associated with mining the Pebble deposit.
