[60Day-14-14AYK]

#### Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. To request more information on the below proposed project or to obtain a copy of the information collection plan and instruments, call 404-639-7570 or send comments to Leroy A. Richardson, 1600 Clifton Road, MS-D74, Atlanta, GA 30333 or send an email to [omb@cdc.gov](mailto:omb@cdc.gov).

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget (OMB) approval. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including

through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information. Written comments should be received within 60 days of this notice.

#### Proposed Project

Information Collection on Cause-Specific Absenteeism in Schools (Pittsburgh Location)—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Division of Global Migration and Quarantine (DGMQ), Centers for Disease Control and Prevention (CDC).

#### Background and Brief Description

The Centers for Disease Control and Prevention (CDC), National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Division of Global Migration and Quarantine (DGMQ), requests approval of a new information collection to better understand the triggers, timing and duration of the use of school related measures for preventing and controlling the spread of influenza during the next pandemic.

The information collection for which approval is sought is in accordance with DGMQ/CDC's mission to reduce morbidity and mortality in mobile populations, and to prevent the introduction, transmission, or spread of communicable diseases within the United States. Insights gained from this information collection will assist in the planning and implementation of CDC Pre-Pandemic Guidance on the use of

school related measures, including school closures, to slow transmission during an influenza pandemic.

School closures were considered an important measure during the earliest stage of the 2009 H1N1 pandemic, because a pandemic vaccine was not available until October (6 months later), and sufficient stocks to immunize all school-age children were not available until December. However, retrospective review of the U.S. government response to the pandemic identified a limited evidence-base regarding the effectiveness, acceptability, and feasibility of various school related measures during mild or moderately severe pandemics. Guidance updates will require an evidence-based rationale for determining the appropriate triggers, timing, and duration of school related measures, including school closures, during a pandemic.

CDC staff proposes that the information collection for this package will target adult and child populations in three school districts in Pennsylvania. CDC will collect reports of individual student symptoms, vaccination status, recent travel, recent exposure to people with influenza symptoms and duration of illness; this will be accomplished through telephone, in-person interviews, and a web-based survey. This information will be used to estimate baseline school absenteeism due to influenza as well as to evaluate the use of absentee recording systems in predicting community-wide influenza transmission.

Findings obtained from this information collection will be used to inform the update CDC's Pre-pandemic Guidance on the implementation of school related measures to prevent the spread of influenza, especially school closures. This Guidance is used as an important planning and reference tool for both State and local health departments in the United States.

CDC estimates that 2,860 participants could be recruited by information collections covered by this information collection. It is estimated that information collection activities will total 1,109 burden hours per year.

There is no cost to respondents other than their time.

#### ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
Parents of children/adolescents attending schools.	School Absentee Reporting .....	2,500	4	5/60	833

## ESTIMATED ANNUALIZED BURDEN HOURS—Continued

Type of respondent	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
Sentinel Family Cohort .....	Cohort Intake .....	360	1	10/60	60
Sentinel Family Cohort .....	Cohort Weekly Illness Reporting .....	360	12	3/60	216
Total .....	.....	.....	.....	.....	1,109

#### Proposed Project

Medical Monitoring Project (MMP)—(OMB No. 0920–0740, Expiration: 5/31/2015)—Revision—National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

#### Background and Brief Description

The Centers for Disease Control and Prevention (CDC), Division of HIV/AIDS Prevention (DHAP) requests a revision of the currently approved Information Collection Request: “Medical Monitoring Project” expiring May 31, 2015. This data collection addresses the need for national estimates of access to and utilization of HIV-related medical care and services, the quality of HIV-related ambulatory care, and HIV-related behaviors and clinical outcomes.

For the proposed project, the same data collection methods will be used as for the currently approved project. Data would be collected from a probability sample of HIV-diagnosed adults in the U.S. who consent to an interview and abstraction of their medical records. As for the currently approved project, de-identified information would also be extracted from HIV case surveillance records for a dataset, referred to as the

minimum dataset, which is used to assess non-response bias, for quality control, to improve the ability of MMP to monitor ongoing care and treatment of HIV-infected persons, and to make inferences from the MMP sample to HIV-diagnosed persons nationally. No other Federal agency collects such nationally representative population-based information from HIV-diagnosed adults. The data are expected to have significant implications for policy, program development, and resource allocation at the state/local and national levels.

The changes proposed in this request update the data collection system to meet prevailing information needs and enhance the value of MMP data, while remaining within the scope of the currently approved project purpose. The result is a 16% reduction in burden, or a reduction of 1,397 total burden hours annually.

A change in sampling methods accounts for the net reduction in burden. Specifically, sampling from the existing HIV case surveillance database, the National HIV Surveillance System (NHSS, OMB Control No. 0920–0573, Exp. 2/29/2016) would replace the current health care-facility-based sampling. This change in sampling methods would broaden participation in MMP to all HIV-infected persons who have been diagnosed and reported to the NHSS, a population that is more representative of persons living with HIV than are persons receiving HIV medical care. Sampling from NHSS will allow MMP to address key information gaps related to increasing access to care, one of three strategic areas of national focus of the National HIV/AIDS Strategy.

The change in project sampling methods reduces the amount of time health care facility staff will spend on project activities, substantially reducing burden hours and offsetting increases in burden from other changes, listed below.

Restoration of the original sample of 26 geographic primary sampling units is proposed in this request, for more complete coverage of the population of
