

boys and girls youth soccer players ages 14–18 playing club soccer; and (3) parents of boys and girls ages 14–18 who are club soccer players. The samples will be drawn from U.S. Youth Soccer, a national youth soccer organization with over 3 million youth players.

CDC will use an online data collection tool for a pre-season survey, followed by a brief weekly surveillance survey administered through an automated

phone system once a week for ten weeks. Respondents will receive a randomly generated identification number that will be used to complete the online and phone surveys. The database linking these identification numbers to participant data will only be available to a limited number of evaluation contractor staff.

The pre-season survey will be administered to the coaches, players, and parents, while the weekly

surveillance reports will only be completed by players and parents. Athletes who report suffering a hit with associated concussive symptoms and the parent of such an athlete will also be administered a phone interview about the athlete's symptoms and management.

There are no costs to respondents other than their time. The total estimated annual burden hours are 2,452.
