### History and Description of the Remains

From 1923 to 1935, human remains representing, at minimum, 94 individuals were removed from the Younge site (20LP1) in Lapeer County, MI. The site is located on farmland north of Imlay City and had been plowed over for years. Between 1923 and 1935, amateur archaeologist Carman Baggerly collected at the site with the landowner's permission. Baggerly donated many of the human remains and objects to the University of Michigan Museum of Anthropological Archaeology (UMMAA) over that period. These donations prompted a UMMAA excavation of the site that occurred from July 19 to November 5, 1935, under the direction of Wilbert Hinsdale and Emerson Greenman.

UMMAA's excavation found 2 distinct structures at the site based on the presence of post molds. These structures were recorded as Enclosures 1 and 2. The structures were described as successively re-built longhouses standing parallel to one another with walls approximately 5–6 feet thick. All of the burials were found within or near Enclosure 1, which was only partially excavated. Archaeologists found hearths and pits filled with a mixture of ashes, charcoal, faunal bones, and tobacco pipe fragments above the burials throughout Enclosure 1. Excavations found 57 distinct burial features, with 16 additional site features having human remains. The individuals included both males and females, ages ranging from infants to older adults. No known individuals were identified. A variety of burial types were found at the site including extended burials, bundle burials, torso burials, and cremations. One burial was noted as containing red ochre. Many of the human remains found within Enclosure 1 show considerable evidence of post-mortem modifications. Post-mortem modifications included cutting, shaving and drilling of the ends of long bones; drilled perforations, smaller than 3cm diameter, at the top of crania and 1 manubrium; and plaque disc removals, larger than 3cm diameter, cut from either the top or back of crania. Some remains were noted as found rearticulated, with the modified heads

of femora inserted into the obturator foramen of the pelvis. Between 1996 and 2006, 1 lot of DNA extractions was taken from human remains in this site collection.

The human remains date to the Late Woodland Period (900–1300 A.D.) based on objects found at the site. The 812 associated funerary objects present are 789 ceramic sherds, 20 black bear bone fragments, 1 stone celt, 1 ceramic elbow pipe, and 1 lot of red ochre and soil.
