Guidance for Evaluation of Acute Chemical Exposures and Proposed Quantitative Standards

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft interim staff guidance; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is soliciting public comment on its draft Interim Staff Guidance (ISG), “Guidance for Evaluation of Acute Chemical Exposures and Proposed Quantitative Standards.” The ISG supplements existing guidance in NUREG–1520, “Standard Review Plan for the Review of a License Application for a Fuel Cycle Facility,” by providing additional guidance for the NRC to follow when evaluating descriptions of proposed quantitative standards. The ISG identifies sources of information on which proposed quantitative standards may be based.

II. Background

A fuel cycle facility licensee that is regulated under part 70 of Title 10 of the *Code of Federal Regulations* (10 CFR), and that is subject to subpart H, “Additional Requirements for Certain Licensees Authorized to Possess a Critical Mass of Special Nuclear Material,” is required to conduct an Integrated safety analysis (ISA) and submit an ISA summary that supports the license application. As relevant to the ISG, the 10 CFR 70.65(b)(7) provision requires that for all credible acute chemical exposure events set forth in 10 CFR 70.61(b)(4) and (c)(4), the ISA summary describe “the proposed quantitative standards used to assess the consequences to an individual from acute chemical exposure to licensed material or chemicals produced from licensed materials.”

The ISG will assist the NRC in determining whether ISA summaries and the underlying ISAs conducted by applicants or licensees adequately consider all credible acute chemical exposure events and exposure pathways. The ISG identifies several sources of chemical hazards information on which proposed quantitative standards may be based. As stated in the ISG, these sources of information include the Emergency Response Planning Guidelines (ERPGs), the Acute Exposure Guidelines Levels (AEGLs), Temporary Emergency Exposure Levels (TEELs), and the Globally Harmonized System of Classification and Labeling of Chemicals (GHS). The ERPGs, AEGLs, TEELs and GHS hazard statements contain information relevant to inhalation exposure pathways. As detailed in the ISG, the National Institute for Occupational Safety and Health Skin Notations, and the GHS hazards statements, contain useful data on which an applicant may base its

proposed quantitative standards for dermal and ocular exposures.
The information from the ISG will be incorporated into the next revision of

NUREG–1520, “Standard Review Plan for the Review of a License Application for a Fuel Cycle Facility,” (ADAMS Accession No. ML101390110).

SUPPLEMENTARY INFORMATION:

Background

The Administrative Dispute Resolution Act of 1996 authorizes and encourages the use of Alternative Dispute Resolution (ADR) procedures by Federal agencies. The term “ADR” refers to a number of voluntary processes, such as mediation and facilitated dialogues that can be used to assist parties in resolving disputes and potential conflicts. These techniques involve the use of a neutral third party, either from within the agency or from outside the agency, and are voluntary processes in terms of the decision to participate and the content of the final agreement. The NRC’s experience with ADR has demonstrated that the use of these techniques can result in more efficient resolution of issues, more effective outcomes, and improved relationships between the agency and other parties. The NRC established the ADR Program in its Office of Enforcement in 2004.

Since the implementation of the ADR Program, the NRC has reached settlement agreements with licensees (or contractors) and individuals, and has issued subsequent ADR confirmatory orders in more than 90 enforcement cases. The parties to ADR in the NRC’s enforcement program are the NRC staff and, in most cases, a licensee. The proceedings are conducted using the facilitation skills of a trained independent mediator. Mediation allows the NRC staff and the licensee to communicate openly and directly and enables the parties to reach effective and workable agreements that meet the NRC’s regulatory interests.
