ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OW–2016–0715; FRL–9994–58–OW]

Recommended Human Health Recreational Ambient Water Quality Criteria or Swimming Advisories for Microcystins and Cylindrospermopsin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: The Environmental Protection Agency (EPA) announces the release of final *Recommended Human Health Recreational Ambient Water Quality Criteria or Swimming Advisories for Microcystins and Cylindrospermopsin*. These are the recommended concentrations of the cyanotoxins microcystins and cylindrospermopsin in recreational waters protective of human health while swimming or participating in primary contact recreational activities on the water. The recommended values found in this document supplement the 2012 Recreational Water Quality Criteria to provide further public health protection for potentially hazardous conditions found in ambient recreational waters.

This document was released for 90-day public comment in the **Federal Register** on December 16, 2016. The EPA has considered the comments, revised the draft document, as appropriate, and published this final document to provide recommendations for states and authorized tribes interested in establishing water quality standards (WQS) under the Clean Water Act (CWA). Alternatively, these same values can be used as the basis for swimming advisories in recreational waters to protect the public. States and authorized tribes may also wish to consider using these values as both WQS and swimming advisory values.

II. What are microcystins and cylindrospermopsin and why is the EPA concerned about them?

Microcystins and cylindrospermopsin are toxins that can be produced by a variety of cyanobacteria species. Cyanobacteria, also commonly referred to as blue-green algae, are photosynthetic bacteria that live in many diverse habitats. Under some conditions, cyanobacteria can proliferate to high densities in surface waters, creating a bloom, and produce toxins that are harmful to humans, the environment, and animals. Excessive growth of cyanobacteria in surface waters can lead to situations in which elevated levels of cyanotoxins are more likely, however, exposure to cyanotoxins can occur even when there are no visible signs of a bloom.

Studies indicate that, at certain concentrations, short-term and long-term adverse effects from oral exposure of microcystins and cylindrospermopsin include liver and kidney damage. Additionally, studies demonstrate that recreational exposures to these cyanotoxins can lead to headaches, sore throats, vomiting and nausea, stomach pain, dry cough, diarrhea, blistering around the mouth, and pneumonia.
