Abstract: Transportation conformity is required under Clean Air Act section 176(c) (42 U.S.C. 7506(c)) to ensure that federally supported transportation activities are consistent with (conform to) the purpose of the State Air Quality Implementation Plan (SIP). Transportation activities include transportation plans, transportation improvement programs (TIPs), and federally funded or approved highway or transit projects. Conformity to the purpose of the SIP means that transportation activities will not cause or contribute to new air quality violations, worsen existing violations, or delay timely attainment of the relevant National Ambient Air Quality Standards (NAAQS) or interim milestones.

Transportation conformity applies under EPA's conformity regulations at 40 CFR part 93, subpart A, to areas that are designated nonattainment and maintenance areas for the following transportation-related criteria pollutants: Ozone, particulate matter (PM_{2.5} and PM₁₀), carbon monoxide (CO), and nitrogen dioxide (NO₂). EPA published the original transportation conformity rule on November 24, 1993 (58 FR 62188), and subsequently published several revisions. EPA

develops the conformity regulations in coordination with the Federal Highway Administration (FHWA) and Federal Transit Administration (FTA). The federal government needs information collected under these regulations to ensure that metropolitan planning organization (MPO) and federal transportation actions are consistent with state air quality goals.

Form Numbers: None.

Respondents/affected entities: MPOs, local transit agencies, state departments of transportation, and state and local air quality agencies.

Respondent's obligation to respond: Mandatory pursuant to Clean Air Act section 176(c) (42 U.S.C. 7506(c)) and 40 CFR part 93.

Estimated number of respondents: 155.

Frequency of response: Typically, once every 4 years for transportation plans and TIPs, and for the largest MPOs with 3 or more NAAQS, once every 3 years for transportation plans and TIPs. As needed for projects.

Total estimated burden: 48,671 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$3,094,989 (per year), includes zero annualized capital or operation and maintenance costs.

Changes in estimates: There is a decrease of 11,877 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. A decrease in burden was projected due to the requirement for transportation conformity ending in PM₁₀, NO₂, and CO maintenance areas that have reached the end of the 20-year maintenance period. A decrease in burden was projected due to fewer transportation conformity determinations for areas previously designated nonattainment or maintenance for the 1997 PM_{2.5} NAAQS. Burden was increased for the 1997 ozone NAAQS due to the *South Coast II* court decision, which occurred during the development of this ICR. The number of training hours was reduced for this ICR as no new emissions model has been released and additional hours for such a model transition and training are not anticipated. Based on the comments and supporting example documentation received during the first public comment period, EPA increased the estimated burden hours by 40% associated with an individual transportation plan and TIP conformity determination in the largest MPOs as well as increased TIP frequency for the

largest MPOs where conformity applies for 3 or more NAAQS.
