**SUPPLEMENTARY INFORMATION:**

Reclamation is issuing this notice  
pursuant to the National Environmental  
Policy Act of 1969, as amended (NEPA),  
42 U.S.C. 4321 *et seq.*; the Council on  
Environmental Quality's (CEQ)  
regulations for implementing NEPA, 43  
CFR parts 1500 through 1508; and the  
Department of the Interior's NEPA  
regulations, 43 CFR part 46.

**Background**

Under the Omnibus Public Land  
Management Act of 2009 (Omnibus  
Act), Public Law (Pub. L.) 111–11,  
Section 9001, Congress authorized  
Reclamation to conduct feasibility  
studies on projects that address water  
shortages within the Boise River Basin  
System and that are considered  
appropriate for study by Reclamation's  
2006 Boise/Payette Water Storage  
Assessment Report (2006 Assessment  
Report). The action proposed was  
identified in the 2006 Assessment  
Report as appropriate for study and is  
the subject of an ongoing feasibility  
study pursuant to the Omnibus Act and  
the Water Infrastructure Improvements  
for the Nation (WIIN) Act of 2016. The  
WIIN Act authorizes Reclamation to  
enter into agreements with requesting  
states or subdivisions thereof to design,  
study, construct, or expand federally  
owned storage projects, and Congress  
has specified that this project be studied  
under WIIN Act authority. Public Law  
114–322, Section 4007.

The Bureau of Reclamation, in  
partnership with the Idaho Water  
Resource Board (IWRB), proposes to  
raise Anderson Ranch Dam 6 feet,  
raising the top of the reservoir pool from  
the present elevation of 4,196 feet to  
4,202 feet, allowing the ability to  
capture and store approximately 29,000  
additional acre-feet of water. This new  
space would allow Reclamation to  
capture additional water when available  
during wet years for supplemental  
supply and to hold over for use during  
dry years. Potential spaceholders  
include existing Reclamation  
contractors and IWRB, which could in  
turn contract water to existing Water  
District 63 water users and/or may offer  
water through the Idaho water supply  
bank's Water District 63 rental pool.

Proposed dam structure modifications  
include:

- Raising the earthen embankment  
dam crest by 6 feet.

- Demolishing the existing spillway crest structure and bridge.
- Removing, rehabilitating, and re-installing the existing radial gates.
- Constructing a new spillway crest structure and bridge.
- Constructing a new two-lane road across the dam.

The existing road across the dam would be closed during construction. An alternative route has been identified that would provide safe public transport. There would likely be a reservoir restriction of 6–10 feet during spillway construction.

In addition to work on the dam, the project would include modification to structures around the reservoir such as culverts, bridges, and recreation sites.

Reclamation is not presently aware of any known or possible Indian Trust Assets or environmental justice issues associated with the proposed action but requests any information relative to this issue be submitted during the scoping period.

Reclamation intends to complete an EIS for this project pursuant to the National Environmental Policy Act to study the potential environmental effects of the proposal and a reasonable range of alternatives designed to respond to the purpose and need for the project, as well as a no-action alternative. The scoping process and public open houses identified in this notice are intended to inform the public about the project and to request public and agency comment to identify significant issues or alternatives to be addressed in the EIS.
