

(currently \$1 million and \$500,000, respectively)? If so, what would be appropriate maximum original amounts for each type of loan?

b. Should the agencies continue to require loan stratification by original loan amount or just collect total amounts for small business and small farm loans without stratification? If the former and the maximum original loan amounts were increased, what would be appropriate original loan amounts for stratification?

c. Should the agencies incorporate an automatic or periodic adjustment for inflation for the maximum original loan amounts going forward?

4. Should the agencies raise the original amount threshold (currently \$100,000) for identifying institutions that hold small business or small farm loans with original amounts predominantly below that threshold that would not need to complete the full stratification in Schedule RC–C, Part II?

5. Should the agencies exempt institutions that hold less than a certain number or total amount of small business or small farm loans from reporting data on these loans in Schedule RC–C, Part II? If so, what would be an appropriate threshold for exemption and why?

Questions on Alternate Approaches

6. Should the agencies consider using other business and farm size indicators to identify or stratify loans, *e.g.*, the borrower's gross annual revenues or asset size, or should the agencies combine original loan amounts with one or more of these other indicators to identify or stratify loans?

a. Would other indicators provide a better measure to identify small business and small farm loans than the original loan amount? If so, which indicators?

b. Are such indicator data available back to the origination dates of existing loans? If so, are the data available in your institution's automated loan systems or in manual form, *e.g.*, in individual borrowers' loan files?

c. If only current indicator data are available, would the current data generally be representative of what the indicator data would have been at origination? Are the current indicator data available in your institution's automated loan systems or in manual form?

7. Should the agencies consider referencing other recognized standards for small business classification, such as the U.S. Small Business Administration's size thresholds for

small businesses, as a way to identify or stratify loans?¹¹

8. Should the agencies consider collecting data only on new loans made during the reporting period (*i.e.*, originations) instead of data on total loans outstanding as of the end of the reporting period regardless of when originated?

9. Are there other approaches the agencies should consider for the identification of, and the collection of information on, small business or small farm loans?

Questions on Potential Challenges and Burden

10. What provisions of the existing Schedule RC–C, Part II, instructions, including the definitions of loans to small businesses and loans to small farms, create difficulties for your institution in reporting in this schedule today? How might the agencies address these issues to reduce reporting burden?

11. What challenges or burden would your institution experience under each of the various options to revise the collection of small business and small farm loan data (*i.e.*, raise existing original amount thresholds; use new indicators to identify small business and small farm loans outstanding as of the end of the reporting period regardless of when the loans were acquired (originated or purchased); use a combination of existing or higher original amount thresholds and new indicators for identifying and stratifying loans outstanding as of the end of the reporting period; collect data only on loan originations during the reporting period rather than total loans outstanding as of the end of the reporting period)?

a. How would burden be affected if a revised method for identifying and reporting small business and small farm loans applies only to loans acquired after the date the revised method takes effect and the collection of data excludes loans held when the revised method takes effect?

b. How would burden be affected if loans acquired after the date the revised method takes effect are reported under a revised method while loans held when the revised method takes effect continue to be reported under the existing Schedule RC–C, Part II, framework, *i.e.*, only by original loan amount?

c. If a revised method were to be used for identifying loans to be reported in Schedule RC–C, Part II, how much lead time would your institution need before you would be prepared to begin reporting under this revised method?

¹¹ See 13 CFR 121.201.

How would lead times differ for the various options referenced above in this question?
