I. Introduction

The NRC is amending its regulations in parts 2, 21, 37, 50, 52, 73, and 110 of title 10 of the *Code of Federal Regulations* (10 CFR) to make miscellaneous corrections. These changes include removing obsolete language and correcting references, a typographical error, mailing, email, and web page addresses, grammatical errors, a division title, and a division address and title. This document is necessary to inform the public of these non-substantive amendments to the NRC's regulations.

II. Summary of Changes

10 CFR Part 2

Correct Reference. In § 2.629(b), this final rule removes the incorrect reference § 2.617(b)(2) and replaces it with the correct reference § 2.627(b)(2).

10 CFR Part 21

Correct typographical error. In § 21.3(2), this final rule corrects a typographical error to reference subpart B instead of subpart C.

10 CFR Part 37

Correct address. In § 37.23(b)(2), this final rule removes the incorrect mailing address, ATTN: Document Control Desk; Director, Office of Nuclear Material Safety and Safeguards and replaces it with the correct mailing address, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; ATTN: Source Management and Protection Branch. In § 37.27(c)(1) and (2), this final rule corrects a mail stop, two email addresses, a division title, and the title of a web page.

10 CFR Part 50

Correct grammatical errors. This final rule corrects grammatical errors in § 50.36(c)(1)(i)(A) and appendix B to 10 CFR part 50, Section I, Organization. In § 50.36(c)(1)(i)(A), the phrase, integrity of certain of the physical barriers is corrected to read integrity of certain physical barriers. The first word in the seventh sentence in appendix B, section I, Organization, is corrected to read "The" instead of "There."

Correct Reference. In appendix J to 10 CFR part 50, option B, subsection IV, Recordkeeping, this final rule removes the reference to § 50.72(b)(1)(ii).

10 CFR Part 52

Remove Obsolete Language. In §§ 52.43(b) and 52.79(c)(2), this final rule removes the word "final" when describing a standard design approval.

Correct Reference. In § 52.83(b), this final rule removes the incorrect reference to § 2.617(b)(2) and replaces it with the correct reference to § 2.627(b)(2). In appendices A through D to 10 CFR part 52, this final rule removes the incorrect reference to ANSI/AISC–690 and replaces it with the correct reference to ANSI/AISC N–690.

10 CFR Part 73

Correct Division Address and Title. In § 73.57(e)(2), this final rule corrects the address and title of a division within the Federal Bureau of Investigation.

Correct Reference. In § 73.70(c), this final rule removes the incorrect reference to § 73.55(d)(6) and replaces it with the correct reference to § 73.55(g)(7). In § 73.71(a)(2), this final rule removes the incorrect reference to § 73.21(g)(3) and replaces it with the correct reference to § 73.22(f)(3). In appendix B, VI.B.1(a)(4), this final rule removes reference to § 73.19 to ensure clarity and orderly codification, as there have never been requirements in § 73.19.

Correct mailing address. In § 73.72(a)(1), this final rule corrects the mailing address where licensees must provide an advance notification of shipment of formula quantities of strategic special nuclear material, special nuclear material of moderate

strategic significance, or irradiated reactor fuel.

10 CFR Part 110

Correct Reference. In § 110.42(e)(1), this final rule removes the incorrect reference to § 110.32(h) and replaces it with the correct reference to § 110.32(g).

III. Rulemaking Procedure

Under section 553(b) of the Administrative Procedure Act (5 U.S.C. 553(b)), an agency may waive the requirements for publication in the **Federal Register** of a notice of proposed rulemaking and opportunity for comment if it finds, for good cause, that it is impracticable, unnecessary, or contrary to the public interest. As authorized by 5 U.S.C. 553(b)(3)(B), the NRC finds good cause to waive notice and opportunity for comment on these amendments, because notice and opportunity for comment is unnecessary. The amendments will have no substantive impact and are of a minor and administrative nature dealing with corrections to certain CFR sections or are related only to management, organization, procedure, and practice. These changes include removing obsolete language and correcting references, a typographical error, mailing, email, and web page addresses, grammatical errors, a division title, and a division address and title. The Commission is exercising its authority under 5 U.S.C. 553(b) to publish these amendments as a final rule. The amendments are effective on December 18, 2019. These amendments do not require action by any person or entity regulated by the NRC, and do not change the substantive responsibilities of any person or entity regulated by the NRC.

IV. Environmental Impact: Categorical Exclusion

The NRC has determined that this final rule is the type of action described in § 51.22(c)(2), which categorically excludes from environmental review rules that are corrective or of a minor, nonpolicy nature and do not substantially modify existing regulations. Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for this rule.

V. Paperwork Reduction Act

This final rule does not contain a collection of information as defined in

the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and, therefore, is not subject to the requirements of the Paperwork Reduction Act of 1995.

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the document requesting or requiring the collection displays a currently valid OMB control number.

VI. Plain Writing

The Plain Writing Act of 2019 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, and well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, “Plain Language in Government Writing,” published June 10, 1998 (63 FR 31883).

VII. Backfitting and Issue Finality

The NRC has determined that the corrections in this final rule do not constitute backfitting and are not inconsistent with any of the issue finality provisions in 10 CFR part 52. The amendments are non-substantive in nature, including removing obsolete language and correcting references, a typographical error, mailing, email, and web page addresses, grammatical errors, a division title, and a division address and title. They impose no new requirements and make no substantive changes to the regulations. The corrections do not involve any provisions that would impose backfits as defined in 10 CFR chapter I or would be inconsistent with the issue finality provisions in 10 CFR part 52. For these reasons, the issuance of this rule in final form would not constitute backfitting or represent a violation of any of the issue finality provisions in 10 CFR part 52. Therefore, the NRC has not prepared any additional documentation for this correction rulemaking addressing backfitting or issue finality.

VIII. Congressional Review Act

This final rule is not a rule as defined in the Congressional Review Act (5 U.S.C. 801–808).

IX. Agreement State Compatibility

Under the “Agreement State Program Policy Statement” approved by the Commission on October 2, 2017, and published in the **Federal Register** on October 18, 2017 (82 FR 48535), NRC program elements (including

regulations) are placed into compatibility categories A, B, C, D, NRC, or adequacy category Health and Safety (H&S). Compatibility Category A program elements are those program elements that are basic radiation protection standards and scientific terms and definitions that are necessary to understand radiation protection concepts. An Agreement State should adopt Category A program elements in an essentially identical manner in order to provide uniformity in the regulation of agreement material on a nationwide basis. Compatibility Category B program elements are those program elements that apply to activities that have direct and significant effects in multiple jurisdictions. An Agreement State should adopt Category B program elements in an essentially identical manner. Compatibility Category C program elements are those program elements that do not meet the criteria of Category A or B, but contain the essential objectives that an Agreement State should adopt to avoid conflict, duplication, gaps, or other conditions that would jeopardize an orderly pattern in the regulation of agreement material on a national basis. An Agreement State should adopt the essential objectives of the Category C program elements. Compatibility Category D program elements are those program elements that do not meet any of the criteria of Category A, B, or C and, therefore, do not need to be adopted by Agreement States for purposes of compatibility. Compatibility Category NRC program elements are those program elements that address areas of regulation that cannot be relinquished to the Agreement States under the Atomic Energy Act of 1954, as amended, or provisions of 10 CFR. These program elements should not be adopted by the Agreement States. Adequacy category H&S program elements are program elements that are required because of a particular health and safety role in the regulation of agreement material within the State and should be adopted in a manner that embodies the essential objectives of the NRC program.

The portion of this final rule that amends part 37 is a matter of compatibility between the NRC and the Agreement States, thereby providing consistency among Agreement State and NRC requirements. The compatibility categories are designated in the following table.

Airworthiness Directives; General Electric Company Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2017–23–06, for certain General Electric Company (GE) CF34–8C1, CF34–8C5, CF34–8C5A1, and CF34–8C5B1 engines. AD 2017–23–06 required an inspection of the bleed air manifold link rod assemblies and the supply, return, and

drain fuel fittings on the operability bleed valve (OBV). This AD requires repetitive inspections of the OBV fuel tubes, OBV bleed air manifold link rod assemblies, and the OBV fuel fittings and replacement of OBVs or related hardware that fail inspection. In addition, this AD expands the applicability of these inspections to include additional GE CF34–8C model turbofan engines. This AD was prompted by multiple engine fires that have occurred as a result of malfunctions related to the OBV. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 23, 2019.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 23, 2019.

SUPPLEMENTARY INFORMATION:**Discussion**

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR

part 39 to supersede AD 2017–23–06, Amendment 39–19100 (82 FR 52830, November 15, 2017), (“AD 2017–23–06”). AD 2017–23–06 applied to certain GE CF34–8C1, CF34–8C5, CF34–8C5A1, and CF34–8C5B1 engines. The NPRM published in the **Federal Register** on June 28, 2019 (84 FR 30956). The NPRM was prompted by multiple engine fires that have occurred as a result of malfunctions related to the OBV. The NPRM proposed to require repetitive inspections of the OBV fuel tubes, OBV bleed air manifold link rod assemblies, and the OBV fuel fittings and replacement of OBVs or related hardware that fail inspection. In addition, the NPRM proposed to expand the applicability of these inspections to include additional GE CF34–8C model turbofan engines. The FAA is issuing this AD to address the unsafe condition on these products.

Comments

The FAA gave the public the opportunity to participate in developing this AD. The following presents the comments received on the NPRM and the FAA’s response to each comment.

Request To Change the Inspection Intervals

GE requested that the FAA extend the initial and repetitive inspection intervals to 16,000 flight hours (FHs) and 1,680 FHs, respectively, for engines equipped with OBV part number (P/N) 4123T71P05. GE reasoned that based on testing and analysis, OBV P/N 4123T71P05 is more resistant to wear than OBV P/N 4123T71P04, and earlier versions, if the installation support links are regularly inspected and maintained.

The FAA disagrees with extending the inspection intervals for engines equipped with OBV P/N 4123T71P05 because the FAA did not find GE’s test and analysis data sufficient to justify the extended inspection intervals. The FAA did not change this AD.

Request To Update the Applicability

The National Transportation Safety Board (NTSB) supported this AD and requested that the FAA consider similar rulemaking to include the GE CF34–8E model turbofan engines. The NTSB suggested that the unsafe condition exists on this engine and that the FAA should identify the higher-risk OBVs and publish an AD that mandates a repetitive inspection for the GE CF34–8E OBVs.

The FAA agrees to consider future rulemaking for the GE CF34–8E model turbofan engines because those engines have experienced the same unsafe condition addressed by the engine
