SUPPLEMENTARY INFORMATION:**I. Abstract**

This request is for a pretest of a new data collection to benefit the National Oceanic and Atmospheric Administration (NOAA), Office of Coastal Management (OCM), and decision-makers on the state and local level in New Hampshire. NOAA will collect economic data pursuant to the Coastal Zone Management Act (CZMA). A change request will follow for the final collection.

The New Hampshire Coastal Risk and Hazards Commission (CRHC) was established by the State Legislature through RSA 483-E on July 2, 2013. The purpose of the Commission, as stated in the law, is to "recommend legislation, rules and other actions to prepare for projected sea-level rise and other coastal watershed hazards such as storms, increased river flooding and storm water runoff, and the risks such hazards pose

to municipalities and the state assets in New Hampshire." Further, in carrying out this charge, the Commission is specifically directed to "review National Oceanic and Atmospheric Administration and other scientific agency projections of coastal storm inundation and flood risk to determine the appropriate information, data, and property risks" to incorporate into its recommendations.

In 2016, the CRHC recommended the development of a "comprehensive, integrated New Hampshire Coastal Shoreline Management Plan (CSMP) that presents general priorities for coastal shoreline management, as well as site-specific and place-based strategies including, where appropriate, protection, adaptation, and abandonment." Following a New Hampshire Shoreline Management workshop organized by the Great Bay National Estuarine Research Reserve (GBNERR) in 2014 and consistent with CRHC Recommendation BL6, the New Hampshire Coastal Program (NHCP) has prioritized living shoreline assessment and implementation in its five-year strategy to enhance coastal management (309 Strategy, 2015) and set a longer term goal to develop a Tidal Shoreline Management Plan (TSMP) for New Hampshire.

The National Ocean Service (NOS) proposes to collect economic data to document perceived effects of weather and climate events and adaptation strategies, to assess probable public benefits that would be derived from shoreline treatment options within coastal New Hampshire, and to establish a baseline for future monitoring of NOAA's success in meeting its mandates and obligations.

Respondents will be randomly sampled from households (1) within New Hampshire, (2) within block groups in Maine adjacent to the Piscataqua River, and (3) within block groups in Massachusetts adjacent to the Hampton-Seabrook Estuary. Questions will explore such issues as participation in recreational activities, familiarity with weather and climate effects and adaptation methods, sense of place, and opinions on shoreline treatment options. No PII will be collected. The final collection will support the development of a CSMP for New Hampshire as well as provide information to help inform local coastal zone management and planning.

II. Method of Collection

The data collection will take place over a five- to nine-month period and will be comprised of a questionnaire to be completed by the respondent. The

data will be collected via a combination of mail and internet survey instrument.

ACTION: Notice of reduction payment tender and industry fee collection system effective date.

SUMMARY: In 2018 the Southeast Revitalization Association (SRA) conducted a bid selection process accepting 36 bids to remove Southeast Alaska Purse Seine salmon permits under a proposed second fishing capacity reduction loan program.
